Grossman, 2024-06-18 Rhetoric and Public Memory in the Science of Disaster grapples with the role of science in the public memory of natural disasters Taking a psychoanalytic and genealogical approach to the rhetoric of disaster science throughout the twentieth century this book explores how we remember natural disasters by analyzing how we try to prevent them Chapters track the development of predictive modeling methods alongside some of the worst and most consequential natural disasters in the history of the United States From miniaturized physical scale models to cartographic renderings within a burgeoning statistical science to ever more complex simulation scenarios disaster science has long created imaginary versions of horrific events in the effort to prevent them Through an exploration of these hypothetical disasters this book theorizes how science itself becomes a site of public memory an increasingly important question in a world of changing weather **Library of Congress Subject Headings** Library of Congress, **InfoWorld** , 1996-06-17 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects The House Across the Street R. K. Byers, 2019-09-26 The book's theme concerns a young adolescent boy growing up and discovering the world of sex and love His success and failures result in his creating his own choices sometimes against his own character leanings often in accordance with his changing biology During this period he sporadically stands apart and examines what is happening as if out of time analyzing its sense and nonsense from a different dimension The sociological and psychological implications alone make this book an

exciting read something akin to Carl Jung meeting Max Weber In addition the theological difficulties from the day take on a life of their own explaining how some of us ended up where we are today The philosophical issues of the day too take on a humorous new life in this seminal work Whether you grew up in the age or not boy or girl it s difficult not being able to walk next to him and understand oneself in a very new way Mr Byers tells stories with the buoyancy of Thomas Wolfe the subtle quirkiness of William Faulkner and the grace of Flannery O Connor Even in its heaviest moments you never want to put the work down caught as one is between wondering whether where it is headed and wishing it would go in another direction Anyone curious about the sixties especially how the era affected their beliefs as well as the present age would enjoy reading this book

Kengne,WuMing Liu,2023-02-23 This book highlights the methods to engineer dissipative and magnetic nonlinear waves  
propagating in nonlinear systems In the first part of the book the authors present methodologically mathematical models of  
nonlinear waves propagating in one and two dimensional nonlinear transmission networks without with dissipative elements  
Based on these models the authors investigate the generation and the transmission of nonlinear modulated waves in general  
and solitary waves in particular in networks under consideration In the second part of the book the authors develop basic  
theoretical results for the dynamics matter wave and magnetic wave solitons of nonlinear systems and of Bose Einstein  
condensates trapped in external potentials combined with the time modulated nonlinearity The models treated here are  
based on one two and three component non autonomous Gross Pitaevskii equations Based on the Heisenberg model of spin  
spin interactions the authors also investigate the dynamics of magnetization in ferromagnet with or without spin transfer
