Global Stability through Decentralization? Peter A.

Wilderer, Martin Grambow, 2015-12-11 The authors of this book who represent a broad range of scientific disciplines discuss the issue of centralized versus decentralized control and regulation in the context of sustainable development The stability and resilience of complex technical economic societal and political systems are commonly assumed to be highly dependent on the effectiveness of sophisticated mainly centralized regulation and control systems and governance structures respectively In nature however life is mainly self regulated by widespread mainly DNA encoded control mechanisms The fact that life has endured for more than 2 4 billion years suggests that for man made systems decentralized control concepts are superior to centralized ones The authors discuss benefits and drawbacks of both approaches to achieving sustainability providing valuable information for students and professional decision makers alike

South Sudan Skills Story Lawrence M.

Tombe, 2017-09-28 The South Sudan Skills Story is an account about manpower and education development in South Sudan a narrative that includes efforts exerted in attainment of the much needed workforce for fuelling the countrys economy now fatally impacted by the ongoing internal strife Prior to escalation of the armed conflict that broke out in December 2013 hardly four years after the country gained its sovereignty on July 9 2011 the new nation was on course in setting up its new education system and basis of sustainable human development now shattered by the vicious war The conflict has eroded the countrys human potential through loss of life skills wastage and extreme brutalities perpetrated against citizens by the war drivers The education quandary is compounded by displacement of over 3 million people from their homes and localities a dire situation that has caused severe food insecurity affecting over 7 5 million people With over 2 million children forced out of school particularly in the most conflict affected regions of South Sudan including over 1 4 million forced out of the country as refugees to neighbouring countries it means that one in every three children in the country is out of school The scale and

magnitude of the unending human dispersal has severely curtailed South Sudans ability to provide education to all its citizens The once adopted slogan of bringing education to all in the country is now a far cry as the new nation heads to total collapse if the conflict is not halted The South Sudan Skills Story urges the leaders of South Sudan who are proponents of the conflict to rise above self serving political cleavages to stop the war for peace so that all the citizens are availed the opportunity to realize their fullest potential for development of the country The narrative concludes that the people of this young nation will remain one of the most undereducated populations in the world as long as the legacy of war violence and impunity prevails in the country

Sustainable Macroeconomics, Climate Risks and Energy Transitions Unurjargal Nyambuu, Willi Semmler, 2023-05-30 Given the industrialized world s historical dependence on fossil fuel based energy resources and the now realized perils of moving beyond the earth s carbon budget this book explores the myriad challenges of climate change and in reaching a low carbon economy Reconciling the medium term competing yet frequently complementary needs for transition policies the book provides guidelines for complex and often conflicting climate policy tasks The book presents empirical trends in the use of carbon emitting resources and evaluates market driven short termism and its adverse impact on resource use and the environment it emphasizes a medium term macroeconomic perspective for the transition The

authors attempt a paradigm shift towards a framework of sustainable macroeconomics. They survey relevant historical models, conduct empirical and numerical analyses of the climate change relevant dynamic models, provide empirical illustrations and evaluate diverse policy options and implementations together with their historical evolution. New analytical issues are also considered, e.g. strategic behavior in the energy and resource sectors, energy competition and the dynamics of market shares in new energy technology and supporting policies for dealing with the tipping points encountered in climate change. The authors suggest a multitude of market based strategies and public fiscal, monetary and financial policies and longer run planning for resource extraction all suitable for driving sustainable growth and a transformation of the energy sector. The book also examines the multiple delaying forces slowing the transition to a low carbon economy; these typically arise from short termism, lock ins, irreversibility, leakages, non cooperative games and other political strategies. Thus they explain the snail's pace evolution of current national and global climate policies. The book will appeal to scholars and students of economics and environmental science. It is also relevant for policymakers and practitioners in multilateral institutions, research institutions as well as governments and ministries of countries interested in alternative energy sources, climate economists and those who study the implementation of sustainable and low carbon based policies.
