

## Waves Lab

Name: \_\_\_\_\_

Use the PHET sim "Wave on a String" for questions 1-6: <https://phet.colorado.edu/en/simulations/selection?category=science>

Play around and get familiar with the sim first.

1. Which type of wave is being shown by this sim? (Transverse, Longitudinal, or Surface)
2. Use arrows, or draw on the wave, to show what will happen when the amplitude is increased:

3. Use arrows, or draw on the wave, to show what will happen when the frequency is increased:

4. What direction does each individual part of the string move when a wave travels along it?
5. What direction does the actual wave move (hint, try pulse)?

**Wave Speed:** Restart the simulation; click Pause; check the box for Pulses. Select Oscillate, No End, set Damping to none. Select any frequency you want (works best for frequencies of 1.00 or greater).

6. Click START. Once wave crests travel all the way down, click Pause. Measure the Wavelength (distance from crest to crest). Now repeat this for a total of four different frequencies. Fill out the table.

| Frequency (Hz) | Wavelength (cm) | Frequency x Wavelength |
|----------------|-----------------|------------------------|
|                |                 |                        |
|                |                 |                        |
|                |                 |                        |
|                |                 |                        |

7. What do you think the quantity Frequency x Wavelength gives you?
