Iezzoni,Bonnie L. O'Day,2010-04-10 Nearly twenty percent of Americans live today with some sort of disability and this number will grow in coming decades as the population ages Despite this the U S health care system is not set up to provide care comfortably safely and efficiently to persons with disabilities Individuals with disabilities can therefore face significant barriers to obtaining high quality health care Some barriers result from obvious impediments such as doors without automatic openers and examining tables that are too high Other barriers arise from faulty communication between patients and health care professionals including misconceptions among clinicians about the daily lives preferences values and abilities of persons with disabilities Yet additional barriers relate to health insurance limits on items and services essential to maximizing health and independence This book examines the health care experiences of

persons who are blind deaf hard of hearing or who have difficulties using their legs arms or hands The book then outlines strategies for overcoming or circumventing barriers to care starting by just asking persons with disabilities about workable solutions Creating safe and accessible health care for persons with disabilities will likely benefit everyone at some point This book has three parts The first part looks at the historical roots of healthcare access for persons with disabilities in the United States The second part discusses the current situation and the special challenges for those with disabilities The third part looks forward to discuss the ways in which healthcare quality and access can improve

Seating and Wheeled Mobility Michelle L. Lange, Jean L. Minkel, 2024-12-30 Fully updated and expanded in its second edition Seating and Wheeled Mobility A Clinical Resource Guide presents clinical assessment considerations when working with a person with a mobility disability The book provides a wide spectrum of information from foundational information for those practitioners who are new to the field to in depth population specific information for practitioners who perhaps have not worked with a particular population in the past The book is divided into sections each section addressing a different area of clinical practice in wheelchair seating and mobility The first section is an in depth presentation of the assessment process and pressure management The range of available seating

supports is presented as part of the product selection process including matching the person's needs with available technology. The second section focuses on 24-hour postural care. Three types of sitters are presented: hands-free, hands-dependent, and prop sitters. Included is the most current method to measure and describe the seated person and related support surfaces needed when recommending a device. The third section lays the foundation for clinical decision making around the selection and fit of the most appropriate wheeled mobility device: manual power wheelchair or scooter. The fourth section provides in-depth clinical applications for each mobility category. On-time mobility for the very young, power seating, and mobility skills training are addressed. The fifth section provides population-specific clinical application of position, pressure management, and mobility for the pediatric, geriatric, and bariatric populations as well as persons with both degenerative and complex neuromuscular impairments. The sixth section presents additional considerations when working with persons who are aging with a disability: considerations of the environment of use, safe transport of a wheelchair, and the application of wheelchair standards in the clinic. Finally, measuring outcomes throughout the service provision process and a look at the past, present, and future of complex rehab technology is included. Richly illustrated throughout, this book has been carefully designed to support occupational and physical therapists, suppliers, distributors, and funders/payers who are interested in wheelchair seating and mobility assessment and applications.
