Breakout Newt Gingrich, 2013-11-04 It is not between the Left and the Right but between the past and the future America is on the edge of a breakout In fact we are poised for one of the most spectacular leaps in human well being in history Pioneers of the future innovators and entrepreneurs are achieving breakthroughs in medicine transportation energy education and other fields that will make the world a dramatically different and better place Unless the prison guards of the past stop them Every American must choose a side Will you be a champion of the future or a prisoner of the past Every potential breakthrough has to get past a host of individuals and institutions whose power and comfort depend on the status quo These prison guards of the past will strangle every innovation that threatens to change the way things have always been done if we let them

series of increasingly capable spacecraft were sent to explore the inner planets Venus and Mercury The history of that planetary exploration is traced in this book along with the evolution of sophisticated spacecraft that unveiled long sought secrets of the planets The spacecraft were ingenious and reflected the best efforts of talented people working with the available technology of the day Additionally this book showcases engineering involved in those capable machines A consecutive series of 34 planetary spacecraft which span the time period 1961 to 2021 are described This includes the

unsuccessful missions of several early spacecraft that paved the way for a better understanding of Venus hostile environments This book will describe many successful spacecraft sent to Venus by the Soviet Union and many successful spacecraft sent to Venus and to Mercury by the United States The recent exploration of Venus by the European Space Agency's Venus Express and the Japanese spacecraft Akatsuki can also be found in this book The author draws on over 50 years of experience on aircraft and spacecraft systems to tell the story of these planetary spacecraft The spacecraft experience includes being the technical lead for the landing radars on the Surveyor and Apollo lunar landers as well as providing analyses for the rendezvous radar for the Space Shuttle Practical engineering experience is augmented by Master's degrees in electrical engineering physics and business administration

Creativity in Large-Scale Contexts Jonathan S. Feinstein, 2023-11-07 A new model for smarter creativity Innovators and creators work in cultural economic and social contexts that shape their work These contexts are large scale filled with overwhelming multitudes of elements and possibilities but these contexts can be fruitfully mined by creative teams Creativity in Large Scale Contexts by Yale professor Jonathan S Feinstein introduces a groundbreaking new network model to describe how successful innovation can be focused generated and accelerated The book will help teams and organizations innovate smarter and faster Feinstein argues that in large scale contexts creativity happens most efficiently when it is actively guided by a creative leader or team Guiding creativity involves understanding navigating and actively using the cultural context identifying puzzles and opportunities and spanning these tensions to create novel connections With thoughtful guidance creators and creative teams can find their way through the thicket of possibilities faster smarter and with less waste Creativity in Large Scale Contexts draws on case studies of famous creators including Virginia Woolf Albert Einstein Indigenous artist Clifford Possum transgender activist and engineer Lynn Conway and Twitter cofounder Jack Dorsey Empirically grounded this book will be essential for teaching and managing creativity and innovation and will open new avenues for future intellectual growth and practice in the field

Spacecraft Dynamics and Control Enrico Canuto, Carlo Novara, Donato Carlucci, Carlos Perez-Montenegro, Luca Massotti, 2018-03-08 Spacecraft Dynamics and Control The Embedded Model Control Approach provides a uniform and systematic way of approaching space engineering control problems from the standpoint of model based control using state space equations as the key paradigm for simulation design and implementation The book introduces the Embedded Model Control methodology for the design and implementation of attitude and orbit control systems The logic architecture is organized around the embedded model of the spacecraft and its surrounding environment The model is compelled to include disturbance dynamics as a repository of the uncertainty that the control law must reject to meet attitude and orbit requirements within the uncertainty class The source of the real time uncertainty estimation prediction is the model error signal as it encodes the residual discrepancies between spacecraft measurements and model output The embedded model and the uncertainty estimation feedback noise estimator in the book constitute the state predictor feeding the control law

Asymptotic pole placement exploiting the asymptotes of closed loop transfer functions is the way to design and tune feedback loops around the embedded model state predictor control law reference generator The design versus the uncertainty class is driven by analytic stability and performance inequalities The method is applied to several attitude and orbit control problems The book begins with an extensive introduction to attitude geometry and algebra and ends with the core themes state space dynamics and Embedded Model Control Fundamentals of orbit attitude and environment dynamics are treated giving emphasis to state space formulation disturbance dynamics state feedback and prediction closed loop stability Sensors and actuators are treated giving emphasis to their dynamics and modelling of measurement errors Numerical tables are included and their data employed for numerical simulations Orbit and attitude control problems of the European GOCE mission are the inspiration of numerical exercises and simulations The suite of the attitude control modes of a GOCE like mission is designed and simulated around the so called mission state predictor Solved and unsolved exercises are included within the text and not separated at the end of chapters for better understanding training and application Simulated results and their graphical plots are developed through MATLAB Simulink code

The Secure and the Dispossessed

Engineering the Environment David P. D. Munns, 2017-07-19 Promising an end to global hunger and political instability huge climate controlled laboratories known as phytotrons spread around the world to thirty countries after the Second World War The United States built nearly a dozen including the first at Caltech in 1949 Made possible by computers and other novel greenhouse technologies of the early Cold War phytotrons enabled plant scientists to experiment on the environmental causes of growth and development of living organisms Subsequently they turned biologists into technologists who in their pursuit of knowledge about plants also set out to master the machines that controlled their environment Engineering the Environment tells the forgotten story of a research program that revealed the shape of the environment the limits of growth and development and the limits of human control over complex technological

systems As support and funding for basic science dwindled in the mid 1960s phytotrons declined and ultimately disappeared until nearly thirty years later the British built the Ecotron to study the impact of climate change on biological communities By revisiting this history of phytotrons David Munns reminds us of the vital role they can play in helping researchers unravel the complexities of natural ecosystems in the Anthropocene
