Global Climate Change James C. White,2012-12-06 Bacteria in a test tube and humans on our planet follow the same population curve as time elapses We on this earth largely through control of disease are rapidly approaching maximum population and through energy demands are using up our resources and accumulating wastes We have come to realize the danger of a maturing system but have made essentially no impact in mitigating or preventing the problems we face While we have been able to change the world we live in most of our effects have been to degrade the planet We have nibbled away at the quality of the atmosphere for centuries and the accumulated damage has resulted in changing the world s climate at an ever increasing rate We now face the possibility of higher average temperatures over most of our planet changing patterns of rainfall rising sea levels aggravated storm systems and a myriad of social effects **The**

regulation of Geoengineering Great Britain: Parliament: House of Commons: Science and Technology Committee,2010-03-18 Geoengineering describes activities specifically and deliberately designed to effect a change in the

global climate with the aim of minimising or reversing anthropogenic climate change The Committee gives three reasons why they believe regulation is needed First in the future some geoengineering techniques may allow a single country to unilaterally affect the climate Second some geoengineering testing is already underway Third we may need geoengineering in the event of a failure to reduce greenhouse gases we are faced with highly disruptive climate change The Committee does not call for an international treaty but for the groundwork for regulatory arrangements to begin The UN is the route by which eventually they envisage the regulatory framework operating but first the UK and other governments need to push geoengineering up the international agenda and get processes moving

A Homology Theory for Smale Spaces Ian F.

Putnam, 2014-09-29 The author develops a homology theory for Smale spaces which include the basics sets for an Axiom A diffeomorphism It is based on two ingredients The first is an improved version of Bowen's result that every such system is the image of a shift of finite type under a finite to one factor map The second is Krieger's dimension group invariant for shifts of finite type He proves a Lefschetz formula which relates the number of periodic points of the system for a given period to trace data from the action of the dynamics on the homology groups The existence of such a theory was proposed by Bowen in the 1970s
