Quantitative Assessment and Validation of Network Inference Methods in Bioinformatics Benjamin Haihe-Kains, Frank Emmert-Streib, 2015-04-14 Scientists today have access to an unprecedented arsenal of high tech tools that can be used to thoroughly characterize biological systems of interest High throughput omics technologies enable to generate enormous quantities of data at the DNA RNA epigenetic and proteomic levels One of the major challenges of the post genomic era is to extract functional information by integrating such heterogeneous high throughput genomic data This is not a trivial task as we are increasingly coming to understand that it is not individual genes but rather biological pathways and networks that drive an organism's response to environmental factors and the development of its particular phenotype In order to fully understand the way in which these networks interact or fail to do so in specific states disease for instance we must learn both the structure of the underlying networks and the rules that govern their behavior In recent years there has been an increasing interest in methods that aim to infer biological networks These methods enable the opportunity for better understanding the interactions between genomic features and the overall structure and behavior of the underlying networks So far such network models have been mainly used to identify and validate new interactions between genes of interest But ultimately one could use these networks to predict large scale effects of perturbations such as treatment by multiple targeted drugs However currently we are still at an early stage of comprehending methods and approaches providing a robust statistical framework to quantitatively assess the quality of network inference and its predictive potential The scope of this Research Topic in Bioinformatics and Computational Biology aims at addressing these issues by investigating the various complementary approaches to quantify the quality of network models These validation techniques could focus on assessing quality of specific interactions global and local structures and predictive ability of network models These methods could rely exclusively on in silico evaluation procedures or they could be coupled with novel experimental designs to generate the biological data necessary to properly validate inferred networks

,Manuel Bensi, 2020-12-10 The reduction of greenhouse gas emissions particularly from fossil fuel powered vehicles and airplanes by means of weight savings and leaner fuel consumption helps to restrain environmental impacts In general for a variety of industries and specifically in the case of transport where both weight savings and increased energy efficiency are pursued the use of metal polymer multi material structures has been growing at an increasing and particularly fast pace in recent years Several manufacturing techniques have been or are being developed with the aim of being used for producing dissimilar materials in cost efficient manners This book presents recent developments in the state of the art of advanced additive manufacturing and the joining of metal polymer multi material structures in transportation This publication mainly focuses on the correlations between microstructure manufacturing process i.e. AddJoining adhesive bonding friction riveting friction based staking and friction spot joining properties and the mechanical performance of metal polymer multi material

(Bill) Wei,2021-07-14 Conservators and other museum professionals face a large number of issues involving the mechanical behavior of materials including questions on craquelure restoring physically damaged objects art in transport or the selection of adhesives However science in conservation and museum studies curricula focusses mostly on chemistry This book fills this important gap in conservation training It is the first such book written specifically for the conservation community and professionals with little or no background in mechanical engineering It introduces the basics of mechanical properties and behavior of materials and objects with examples and exercises based on conservation practice More complex issues of mechanical loading and advanced solutions are also introduced *Real-time Digital Signal Processing for Software-defined Optical Transmitters and Receivers* Schmogrow, Rene Marcel,2014-11-21 A software defined optical Tx is designed and demonstrated generating signals with various formats and pulse shapes in real time Special pulse shapes such as OFDM or Nyquist signaling were utilized resulting in a highly efficient usage of the available fiber channel bandwidth This was achieved by parallel data processing with high end FPGAs Furthermore highly efficient Rx algorithms for carrier and timing recovery as well as for polarization demultiplexing were developed and investigated Issues in Aging Mark Novak,2018-02-02 Issues in Aging combines social psychological biological and philosophical perspectives to present a multifaceted picture of aging Novak illustrates both the problems and the opportunities that accompany older age This text helps students understand the tremendous variability in aging and introduces them to careers working with older adults This new edition reflects the continued changes in the way we age The fourth edition has been updated to include emerging issues in aging These include the prevalence of HIV AIDs in later life current research on mental potential in old age the creation of age friendly cities and new options for end of life care Each chapter begins with a set of learning objectives to guide students in their reading and concludes with a list of main points questions for discussion or study suggested readings and relevant web sites to consult Each chapter also includes up to date charts and graphs as well as key terms to help students understand the issues presented Break out boxes reveal the human side of aging through the stories of individuals in real life and in the media *The Geopolitics of Spectacle* Natalie Koch,2018-06-15 Why do autocrats build spectacular new capital cities In *The Geopolitics of Spectacle* Natalie Koch considers how autocratic rulers use spectacular projects to shape state society relations but rather than focus on the standard approach on the project itself she considers the unspectacular others The contrasting views of those from the poorest regions toward these new national capitals help her develop a geographic approach to spectacle Koch uses Astana in Kazakhstan to exemplify her argument comparing that spectacular city with others from resource rich nondemocratic nations in central Asia the Arabian Peninsula and Southeast

Asia The Geopolitics of Spectacle draws new political geographic lessons and shows that these spectacles can be understood only from multiple viewpoints sites and temporalities Koch explicitly theorizes spectacle geographically and in so doing extends the analysis of governmentality into new empirical and theoretical terrain With cases ranging from Azerbaijan to Qatar and Myanmar and an intriguing account of reactions to the new capital of Astana from the poverty stricken Aral Sea region of Kazakhstan Koch's book provides food for thought for readers in human geography anthropology sociology urban studies political science international affairs and post Soviet and central Asian studies Programming Languages Norman Ramsey, 2022-10-27 Teaches students about great programming language ideas and how to use them in programming practice **Index of Specifications and Standards**, 2002 **Finite Difference Methods, Theory and Applications** Ivan Dimov, István Faragó, Lubin Vulkov, 2015-06-16 This book constitutes the thoroughly refereed post conference proceedings of the 6th International Conference on Finite Difference Methods FDM 2014 held in Lozenetz Bulgaria in June 2014 The 36 revised full papers were carefully reviewed and selected from 62 submissions These papers together with 12 invited papers cover topics such as finite difference and combined finite difference methods as well as finite element methods and their various applications in physics chemistry biology and finance The Coevolution of IDO1 and AhR in the Emergence of Regulatory T Cells in Mammals Ursula Grohmann, Paolo Puccetti, 2016-01-28 Indoleamine 2,3-dioxygenase IDO1 is an ancestral enzyme that initially confined to the regulation of tryptophan availability in local tissue microenvironments is now considered to play a wider role that extends to homeostasis and plasticity of the immune system Thus IDO biology has implications for many aspects of immunopathology including viral infections neoplasia autoimmunity and chronic inflammation Its immunoregulatory effects are mainly mediated by dendritic cells DCs and involve not only tryptophan deprivation but also production of kynurenines that act on IDO DCs thus rendering an otherwise stimulatory DC capable of regulatory effects as well as on T cells The aryl hydrocarbon receptor AhR is a ligand operated transcription factor originally recognized as the effector mediating the pathologic effects of dioxins and other pollutants However it is now well established that AhR activation by endogenous ligands can produce immunoregulatory effects The IDO1 mechanism appears to have been selected through phylogenesis primarily to prevent overreacting responses to TLR recognized pathogen associated molecular patterns and only later did it become involved in the response to T cell receptor recognized antigens As a result in mammals IDO1 has become pivotal in fetomaternal tolerance at a time when regulatory T cells emerged to meet the same need namely protecting the fetus IDO1 and regulatory T Treg cells may have then coevolved to broaden their function well beyond their initial task of protecting the fetus such that in acquired immunity IDO1 with its dual enzymic and signaling function has turned into an important component of the peripheral generation and effector function of regulatory T cells AhR in turn which has a role in regulatory T cell generation is presumed to have evolved from invertebrates where it served a ligand independent role in normal development processes Evolution of the receptor in vertebrates resulted in the

ability to bind structurally different ligands including xenobiotics and microbiota derived catabolites Considering the inability of invertebrate AhR homologs to bind dioxins the adaptive role of the AhR to act as a regulator of xenobiotic metabolizing enzymes may have been a vertebrate innovation to later acquire an additional immune regulatory role by coevolutionary pressure in mammals by IDO1 and regulatory T cells Thus an entirely new paradigm in immunology and more specifically in immune tolerance is the coevolution of three systems namely the IDO1 mechanism AhR driven gene transcription and T cell regulatory activity that originating from the initial need of protecting the fetus in mammals have later turned into a pivotal mechanism of peripheral tolerance in autoimmunity transplantation and neoplasia **Sound and Music Computing** Tapio

Lokki, Stefania Serafin, Meinard Müller, Vesa Välimäki, 2018-06-26 This book is a printed edition of the Special Issue Sound and Music Computing that was published in Applied Sciences **Trump's Democrats** Stephanie Muravchik, Jon A.

Shields, 2020-09-29 Why did hundreds of Democratic strongholds break for Donald Trump in 2016 and stay loyal to him in 2020 Looking for answers Muravchik and Shields lived in three such flipped communities There they discovered a political culture that was Trumpy long before the 45th president arrived on the national political scene In these places dominated by the white working class some of the most beloved and longest serving Democratic leaders are themselves Trumpian grandiose combative thin skinned and nepotistic Indifferent to ideology they promise to take care of their people by cutting deals and corners if needed Stressing loyalty they often turn to family to fill critical political roles Trump resembling these old style Democratic bosses strikes a familiar and appealing figure in these communities Although voters in flipped communities have often been portrayed as white supremacists Muravchik and Shields find that their primary political allegiances are to place not race They will spend an extra dollar to patronize local businesses and they think local jobs should go to their neighbors not foreigners from neighboring counties who are just as likely to be white and native born Unlike the Proud Boys they take more pride in their local communities than in their skin color Trump successfully courted these Democrats by promising to revitalize their struggling hometowns Because these communities largely stuck with Trump in 2020 Biden won the presidency by just the thinnest of margins Whether they will continue to support a Republican Party without Trump or swing back to the Democrats depends in part on which party can satisfy these locally grown political tastes and values The party that does that will enjoy a stranglehold in national elections for years to come *Assembling*

Financialisation Zannie Langford, 2023-10-13 Farmers Indigenous organisations government and private sector intermediaries from remote Northern Australia often negotiate with private finance capital to gain funds for agricultural development The concept of financialisation is used to explore the drivers and effects of agrifood restructuring in the area while assemblage theory is applied to position local actors as potential sites of power in negotiating connections between local spaces and global finance This book demonstrates that while financialisation is a useful signifier of patterns of global change it is assembled by a diverse range of often contradictory work **Civil Engineering and Urban Research,**

Volume 1 Hazem Samih Mohamed, Jinfang Hou, 2023-03-28 Civil Engineering and Urban Research collects papers resulting from the conference on Civil Architecture and Urban Engineering ICCAUE 2022 Xining China 24-26 June 2022. The primary goal is to promote research and developmental activities in civil engineering, architecture, and urban research. Moreover, it aims to promote scientific information interchange between scholars from the top universities, business associations, research centers, and high-tech enterprises working all around the world. The conference conducts in-depth exchanges and discussions on relevant topics such as civil engineering and architecture, aiming to provide an academic and technical communication platform for scholars and engineers engaged in scientific research and engineering practice in the field of urban engineering, civil engineering, and architecture design. By sharing the research status of scientific research achievements and cutting-edge technologies, it helps scholars and engineers all over the world comprehend the academic development trend and broaden research ideas. So as to strengthen international academic research, academic topics exchange and discussion, and promote the industrialization cooperation of academic achievements.

Crisis, Austerity, and Everyday Life Gargi Bhattacharyya, 2015-10-29 Will austerity ever end? This timely and insightful book argues that austerity seeks to set the terms of political and economic life for the foreseeable future, extending techniques of exclusion to ever greater sections of the population.

Cerambycidae of the World Qiao Wang, 2017-01-06 Wang has gathered contributions from an impressive cohort of the world's most respected experts on longhorned beetles. Chapters review both basics of cerambycid taxonomy, morphology, and behavior, feeding, reproduction, and chemical ecology, as well as more applied concerns such as laboratory rearing, pest control, and biosecurity. Overall, this volume is a valuable contribution to the literature as a one-stop shop for readers seeking a comprehensive overview of longhorned beetles. It represents a tremendous effort on the part of Wang and the authors and has resulted in a much-needed update to the literature. This volume is the only work of its kind available at this time and is a valuable addition to the library of any scientist studying wood-boring beetles. Ann M. Ray, Biology, Xavier University, Cincinnati, Ohio, in *The Quarterly Review of Biology*, Volume 94, 2019. There are more than 36,000 described species in the family Cerambycidae in the world. With the significant increase of international trade in the recent decades, many cerambycid species have become major plant pests outside their natural distribution range, causing serious environmental problems at great cost. Cerambycid pests of field, vine, and tree crops, and of forest and urban trees, cost billions of dollars in production losses, damage to landscapes, and management expenditures worldwide. *Cerambycidae of the World: Biology and Pest Management* is the first comprehensive text dealing with all aspects of cerambycid beetles in a global context. It presents our current knowledge on the biology, classification, ecology, plant disease transmission, and biological, cultural, and chemical control tactics, including biosecurity measures from across the world. Written by a team of global experts, this book provides an entrance to the scientific literature.
