Abstract The purpose of this study was to determine the effect of a 12-week, low-intensity, low-impact, and low-impact aerobically fit individuals. The study was conducted in a laboratory setting. The subjects were 12 healthy, young, and fit individuals (6 males and 6 females) who were randomly assigned to three groups: low-intensity, low-impact, and low-impact. The subjects were tested at baseline and after 12 weeks of training. The results showed that the low-intensity group had a significant increase in heart rate, oxygen consumption, and energy expenditure. The low-impact group had a significant increase in heart rate and oxygen consumption. The low-impact group had a significant increase in heart rate, oxygen consumption, and energy expenditure. The results suggest that low-intensity, low-impact, and low-impact aerobically fit individuals can benefit from a 12-week, low-intensity, low-impact, and low-impact training program.
