

5.1| EARTH MAGNETISM

Whenever a magnet is suspended freely it always points in the geographical north and geographical south direction.

To Explain this property of magnet it can be supposed that there is a huge magnet at the centre of earth with its north pole towards geographical south and south pole towards geographic north. **Magnetism due to this magnet is known as Earth's magnetism.**

SOME IMPORTANT TERMS

- 1) **Geographic axis:** Line along the geographical north-south direction is called geographical axis.
- 2) **Geographical meridian:** Vertical plane passing through the geographical axis is called Geographic meridian.
- 3) **Magnetic axis:** A line joining the magnetic North and South Pole is known as magnetic axis.
- 4) **Magnetic meridian:** A vertical plane passing through the magnetic axis is called magnetic meridian.

This textbook provides the theories and methods of simulation to study and to understand these properties in an explicit manner. In the first part of the book, the quantum theory of magnetism is presented while the second part of the book is devoted to the application of the theory of magnetism to surface physics. Numerous examples covering typical cases in ferromagnets, antiferromagnets, ferrimagnets, helimagnets, and frustrated spin systems are all illustrated. Fundamental surface effects are shown and discussed. Lastly, the spin transport is described in which the basic formulation of the Boltzmann's equation is recalled and the recent methods of Monte Carlo simulation to deal with the spin resistivity are explained. This book contains a large number of detailed solutions for the problems given in each chapter to help readers discover new related phenomena and applications, as well as an appendix on elements of statistical physics included at the end to make the book self-contained. **Fundamentals of Magnonics** Sergio M.
