## Pre Lab Work:

Before beginning this laboratory, answer the following questions on your own piece of paper in your notebook:

- Define the following terms:
  - growth rate – describes how fast a population is increasing or decreasing and is dependent upon the birth rate and death rate
  - birthrate – is the number of infants born in a given year/1000 people in the population
  - death rate – is the number of people who die in a given year/1000 individuals in the population
  - zero population growth – when the population is in equilibrium or the number of births and deaths are equal
  - developed country – countries that highly developed economy and advanced technology
  - developing country – countries that are considered to have low standard of living, and undeveloped industrially
  - demographic transition – refers to the transition from high birth and death rates to low birth and death rates
- What is a population explosion? How quickly is our population growing each year? What about each day?  
A population explosion is when a population lacks limited resources so is able to grow out of control. The human population is grows about 80 million a year and 219, 178 each day.
- How is the growth rate of the human population calculated?  
 $\text{Growth rate} = \text{birth rate} - \text{death rate}$
- What causes a negative population growth? What causes a positive population growth?  
Negative population growth occurs when the birth rate is less than the death rate  
Positive population growth occurs when the birth rate exceeds the death rate
- Why do the two graphs appear to have a different shape?  
The population growth rate was much slower in the earlier years. The J-curve shows exponential population growth and the graphs are not drawn to the same scale.
- Using a piece of paper, create the following charts:

Country	Birthrate (%)	Death rate (%)	Population Growth 2005	Population Growth 2050	Demographic Transition	Relative Place in Transition	Sketch graph showing Blue & Pink Line
USA	2.06	0.51	0.92	-0.06	1.55	5

The text presents a unifying **Dr. Calhoun's Mousery** Lee Alan Dugatkin, 2024-10-03. A bizarre and compelling biography of a scientist and his work using rodent cities to question the potential catastrophes of human overpopulation. It was the strangest of experiments. What began as a utopian environment where mice had sumptuous accommodations, had all the food and water they could want, and were free from disease and predators, turned into a mouse hell. Science writer and animal behaviorist Lee Alan Dugatkin introduces readers to the peculiar work of rodent researcher John Bumpass Calhoun. In this enthralling tale, Dugatkin shows how an ecologist turned psychologist turned futurist became a science rock star embedded in the culture of the 1960s and 1970s. As interest grew in his rodent cities, Calhoun was courted by city planners, and his work was reflected in everything from Tom Wolfe's hard-hitting writing to the children's book *Mrs. Frisby and the Rats of NIMH*. He was invited to meetings with the Royal Society and the pope and taken seriously when he proposed a worldwide cybernetic brain a decade before others made the internet a reality. Readers see how Calhoun's experiments, rodent apartment complexes like Mouse Universe 25, led to his concept of behavioral sinks with real effects on public policy discussions. Overpopulation in Calhoun's mouse and rat complexes led to the loss of sex drive, the absence of maternal care, and a class of automatons that included the beautiful ones who spent their time grooming themselves while shunning socialization. Calhoun and those who followed his work saw the collapse of this mouse population as a harbinger of the ill effects of an overpopulated human world. Drawing on previously unpublished archival research and interviews with Calhoun's family and former colleagues, Dugatkin offers a riveting account of an intriguing scientific figure. Considering Dr. Calhoun's experiments, he explores the changing nature of scientific research and delves into what the study of animal behavior can teach us about ourselves. Prentice Hall Science Explorer: Teacher's ed., 2005. **Mathematics and Technology** Gilles Aldon, Fernando Hitt, Luciana Bazzini, Uwe Gellert, 2017-04-05. This volume collects most recent work on the role of technology in mathematics education. It offers fresh insight and understanding of the many ways in which technological resources can improve the teaching and learning of mathematics. The first section of the volume focuses on the question how a proposed mathematical task in a technological environment can influence the acquisition of knowledge and what elements

are important to retain in the design of mathematical tasks in computing environments The use of white smart boards platforms as Moodle tablets and smartphones have transformed the way we communicate both inside and outside the mathematics classroom Therefore the second section discussed how to make efficient use of these resources in the classroom and beyond The third section addresses how technology modifies the way information is transmitted and how mathematical education has to take into account the new ways of learning through connected networks as well as new ways of teaching The last section is on the training of teachers in the digital era The editors of this volume have selected papers from the proceedings of the 65th 66th and 67th CIEAEM conference and invited the correspondent authors to contribute to this volume by discussing one of the four important topics The book continues a series of sourcebooks edited by CIEAEM the Commission Internationale pour l'étude et l'amélioration de l'Enseignement des Mathématiques International Commission for the Study and Improvement of Mathematics Education *Inquiry: The Key to Exemplary Science* Robert Yager, 2009-06-17
