Bioformulations: for Sustainable Agriculture Naveen Kumar Arora, Samina Mehnaz, Raffaella Balestrini, 2016-06-06 More than a century has passed since the first bioformulations were introduced to the market But there is still much to be done explored and developed Though bioformulations offer green alternatives and are important for sustainable agriculture they make up only a small fraction of the total additions used to enhance crop yields or protect them from pests There is a great need to develop bioformulations that can promote confidence among end users accordingly it is imperative that bioformulations to replace chemicals be reliable and overcome the shortcomings of the past Bioformulations for Sustainable Agriculture discusses all the issues related to the current limitations and future development of bioformulations It examines

in detail those bioformulations that include biofertilizers and biopesticides also commonly known as bioinoculants presenting a global picture of their development Further chapters address diverse microbes that are already being or could be used as bioformulations The book also discusses the techniques tools and other additions required to establish bioformulations as trustworthy and global solutions It assesses the types of bioformulations currently available on the market while also considering the future roles of bioformulations including the reclamation of marginal and polluted soils Further it discusses the current legislation and much needed amendments Overall the book provides a comprehensive outlook on the status quo of bioformulations and the future approaches needed to improve them and achieve sustainable agriculture and food security without sacrificing the quality of soils This will be extremely important in offering chemical free foods and a better future for generations to come

Biostimulants for Crop Production and Sustainable Agriculture Mirza Hasanuzzaman, Barbara Hawrylak-Nowak, Tofazzal Islam, Masayuki Fujita, 2022-09-14 Agricultural biostimulants are a group of substances or microorganisms based on natural resources that are applied to plants or soils to improve nutrient uptake and plant growth and provide better tolerance to various stresses Their function is to stimulate the natural processes of plants or to enrich the soil microbiome to improve plant growth nutrition abiotic and or biotic stress tolerance yield and quality of crop plants Interest in plant biostimulants has been on the rise over the past 10 years driven by the growing interest of researchers and farmers in environmentally friendly tools for improved crop performance Improved crop production technologies are urgently needed to meet the growing demand for food for the ever increasing global population by addressing the impacts of changing climate on agriculture This book is of interest to researchers in agriculture agronomy crop and plant science soil science and environmental science
