This standard covers any vehicle with a MAC system using a belt or electric motor driven compressor. This document provides standards for design, assembly, test, and service of MAC systems to minimize environmental health and safety impacts. Also included are cautionary statements for the service industry to alert technicians to the inadvisability and possible health or safety effects associated with venting refrigerant during service. It is not intended to restrict the use or further development of other types of refrigeration systems for mobile air conditioning applications. This document may be amended or additional safety standards created should other systems become practical. This document addresses only HFC 134a, R 134a carbon dioxide, R 744, and HFO 1234yf. R 1234yf refrigerants. To prevent system contamination, all refrigerants used in mobile air conditioning vapor compression systems require unique service fittings and service equipment. The unique service fittings are intended to eliminate the potential for system refrigerant cross contamination during service activity. CFC 12, R 12, is no longer in use in new MAC systems. The service fitting description is maintained as a reference for older vehicles still in use. When retrofitting an R 12 system to use R 134a or when removing R 12, vehicle disposal use service equipment designed for R 12 and certified to meet the requirements of SAE J1990. R 12 recovery and recycle equipment. HFC 152a is an A2 flammable refrigerant as classified by ASHRAE 34 and should be used only with a secondary loop application. However, until MAC systems are developed to use R 152a, HFC 152a, no SAE Standards for system design, service equipment, or service procedures have been established. The R 152a service fittings described within this Standard were established as part of the industry's evaluation of replacement refrigerants and are maintained for future design guidance and to prevent potential refrigerant cross contamination. The SAE Interior Climate Control Standards Committee has been involved with the mobile air conditioning industry in developing alternate low GWP replacement refrigerants. The revisions in this document cover engineering guidelines and establishing specifications for mobile air conditioning systems using current and alternate replacement refrigerants. R 1234yf is added here for the first time.
