

Introduction

Running a research laboratory is a tremendous challenge. In all the hustle of mixing, pipetting, loading the auto-sampler and pouring chemicals for the research experiment, one's health and safety can be easily forgotten leading to dire consequences. The laboratory is a hazardous environment to operate. Many workers are not conversant with the potential hazards in the laboratory environment, thus, making them very vulnerable to suffering from these hazards. Therefore, it is much required to understand the occupational safety and health administration programs and recognize hazards associated with operating a research laboratory. This plays an important role in identifying and minimizing these hazards.

As part of recognizing these hazards, it is important to identify their categorization. Hazards may be categorized into chemical hazards, biological hazards, radiation hazards, electrical hazards and physical hazards including mechanical hazards, airborne hazardous materials, and ergonomics related hazards and noise hazards.

The use of chemical in a research laboratory is unavoidable and the potential of injury can be immense if they are handled negligently or mishandled. Chemical hazards include many organic and inorganic chemicals such as carcinogens, drugs, cleaning agents, disinfectants, solvents, anaesthetics, mineral acids and alkalis which are highly corrosive and acid halides and phenols which are also toxic and highly corrosive (Health and Safety Authority 2004)

Biological hazards include potential exposures to infectious zoonotic; diseases transmissible to humans from animals, allergic causing agents such

Safety Research Paper
