Thomas Cole's Journey Elizabeth Mankin Kornhauser,Tim Barringer ,2018-01-29 Thomas Cole 1801 1848 is celebrated as the greatest American landscape artist of his generation Though previous scholarship has emphasized the American aspects of his formation and identity never before has the British born artist been presented as an international figure in direct dialogue with the major landscape painters of the age Thomas Cole s Journey emphasizes the artist s travels in England and Italy from 1829 to 1832 and his crucial interactions with such painters as Turner and Constable For the first time it explores the artist s most renowned paintings The Oxbow 1836 and The Course of Empire cycle 1834 36 as the culmination of his European experiences and of his abiding passion for the American wilderness The four essays in this lavishly illustrated catalogue examine how Cole s first hand knowledge of the British industrial revolution and his study of the

Roman Empire positioned him to create works that offer a distinctive even dissident response to the economic and political rise of the United States the ecological and economic changes then underway and the dangers that faced the young nation A detailed chronology of Cole s life focusing on his European tour retraces the artist s travels as documented in his journals letters and sketchbooks providing new insight into his encounters and observations With discussions of over seventy works by Cole as well as by the artists he admired and influenced this book allows us to view his work in relation to his European antecedents and competitors demonstrating his major contribution to the history of Western art **Applications of**

computational photography have revolutionized the imaging industry Computational photography is a combination of imaging techniques at the intersection of various fields such as optics computer vision and computer graphics These methods enhance the capabilities of traditional digital photography by applying computational techniques both during and after the capturing process This thesis targets two major subjects in this field High Dynamic Range HDR image reconstruction and Light Field LF compressive capturing compression and real time rendering The first part of the thesis focuses on the HDR images that concurrently contain detailed information from the very dark shadows to the brightest areas in the scenes One of the main contributions presented in this thesis is the development of a unified reconstruction algorithm for spatially variant exposures in a single image This method is based on a camera noise model and it simultaneously resamples reconstructs denoises and demosaics the image while extending its dynamic range Furthermore the HDR reconstruction algorithm is extended to adapt to the local features of the image as well as the noise statistics to preserve the high frequency edges during reconstruction In the second part of this thesis the research focus shifts to the acquisition encoding reconstruction and rendering of light field images and videos in a real time setting Unlike traditional integral photography a light field captures the information of the dynamic environment from all angles all points in space and all spectral wavelength and time This thesis employs sparse representation to provide an end to end solution to the problem of encoding real time reconstruction and rendering of high dimensional light field video data sets These solutions are applied on various types of data sets such as light fields captured with multi camera systems or hand held cameras equipped with micro lens arrays and spherical light fields Finally sparse representation of light fields was utilized for developing a single sensor light field video camera equipped with a color coded mask A new compressive sensing model is presented that is suitable for dynamic scenes with temporal coherency and is capable of reconstructing high resolution light field videos

Versatile Video Coding Humberto Ochoa Dominguez, K.R. Rao, 2022-09-01 Video is the main driver of bandwidth use accounting for over 80 per cent of consumer Internet traffic Video compression is a critical component of many of the available multimedia applications it is necessary for storage or transmission of digital video over today's band limited networks The majority of this video is coded using international standards developed in collaboration with ITU T Study Group and MPEG The MPEG family of video coding standards begun on the early 1990s with MPEG 1 developed for video and audio storage on CD ROMs with support for progressive video MPEG 2 was standardized in 1995 for applications of video on DVD standard and high definition television with support for interlaced and progressive video MPEG 4 part 2 also known as MPEG 2 video was standardized in 1999 for applications of low bit rate multimedia on mobile platforms and the Internet with the support of object based or content based coding by modeling the scene as background and foreground Since MPEG 1 the main video coding standards were based on the so called macroblocks However research groups continued the work beyond the traditional video coding

architectures and found that macroblocks could limit the performance of the compression when using high resolution video. Therefore in 2013 the high efficiency video coding HEVC also known as H.265 was released with a structure similar to H.264 AVC but using coding units with more flexible partitions than the traditional macroblocks. HEVC has greater flexibility in prediction modes and transform block sizes also it has a more sophisticated interpolation and de blocking filters. In 2006 the VC-1 was released. VC-1 is a video codec implemented by Microsoft and the Microsoft Windows Media Video VM-9 and standardized by the Society of Motion Picture and Television Engineers SMPTE. In 2017 the Joint Video Experts Team JVET released a call for proposals for a new video coding standard initially called Beyond the HEVC Future Video Coding FVC or known as Versatile Video Coding VVC. VVC is being built on top of HEVC for application on Standard Dynamic Range SDR, High Dynamic Range HDR and 360 Video. The VVC is planned to be finalized by 2020. This book presents the new VVC and updates on the HEVC. The book discusses the advances in lossless coding and covers the topic of screen content coding. Technical topics discussed include: Beyond the High Efficiency Video Coding, High Efficiency Video Coding encoder, Screen content Lossless and visually lossless coding algorithms, Fast coding algorithms, Visual quality assessment, Other screen content coding algorithms, Overview of JPEG Series.
