

## Virtual Lab Manual

# Polymerization Chain Reaction

### Background

The term "polymerization" refers to the process of combining small molecules called monomers together to form larger molecules known as polymers. These smaller, repeating units are called repeat units. Polymers formed from repeating unit structures are often called macromolecules because they have large molecular weights.

### Objectives

After completing this lab, you will be able to describe the mechanism of radical polymerization. You will also learn how to calculate the molecular weight of a polymer based on its repeat unit structure, and write equations.

### What is a Radical Polymerization?

All radical polymerizations follow a similar three-step mechanism. In this mechanism, the first step is the initiation of a radical species. This radical species reacts with a monomer molecule to form a polymer chain.

### Initiate the Reaction

In this first initiation step, the radical species reacts with a monomer molecule to form a polymer chain. This reaction is called a propagation reaction, and the radical species continues to react with monomers to form a polymer chain.

### Terminating Reactions

The final stage of this mechanism, which ends the polymer chain, is the termination step. There are several types of termination reactions, including:

- Radical-radical termination
- Radical-monomer termination
- Radical-polymer termination

Krieg,1996-08-15 Here is the most complete guide available to the isolation analysis and synthesis of RNA It covers everything researchers and laboratory workers need to know about the study of gene expression via RNA analysis from the theory behind the methods to actual problem solving techniques Step by step protocols are presented for each method A careful presentation of the experimental formalities of these protocols enables specialists and nonspecialists alike to implement the methods easily in the laboratory Each protocol is accompanied by the theoretical background underlying the experimental procedure and most chapters contain illustrations of typical results and troubleshooting tips A Laboratory Guide to RNA offers a straightforward detailed account of experimental procedures ranging from the isolation of RNA from a variety of cell and tissue types detection analysis and quantitation using a range of strategies to large and small scale synthesis of RNA This unique guide not only covers established procedures such as RNA blotting and nuclease protection but also the latest protocols for quantitative PCR and differential display Protocols addressing *in situ* hybridization are highlighted in an eight page full color section that

illustrates the power of the technique for detection of gene expression in tissues and whole organisms. Featuring contributions from leading research laboratories and the biotechnology field A Laboratory Guide to RNA Isolation Analysis and Synthesis provides all the methods required for RNA analysis. It is the ideal laboratory guide for research scientists graduate students and lab personnel who need a solid reference on the analysis of gene expression at the RNA level.

*Molecular Biology Techniques* Sue Carson, Heather B. Miller, Melissa C. Srougi, D. Scott Witherow, 2019-03-05 Molecular Biology Techniques A Classroom Laboratory Manual Fourth Edition is a must have collection of methods and procedures on how to create a single continuous comprehensive project that teaches students basic molecular techniques. It is an indispensable tool for introducing advanced undergraduates and beginning graduate students to the techniques of recombinant DNA technology or gene cloning and expression. The techniques used in basic research and biotechnology laboratories are covered in detail. Students will gain hands on experience on subcloning a gene into an expression vector straight through to the purification of the recombinant protein. Presents student tested labs proven successful in real classroom laboratories. Includes a test bank on a companion website for additional testing and practice. Provides exercises that simulate a cloning project that would be performed in a real research lab. Includes a prep list appendix that contains necessary recipes and catalog numbers providing staff with detailed instructions.
