Allmon, Margaret M. Yacobucci, 2016-10-05 Although the species is one of the fundamental units of biological classification there is remarkably little consensus among biologists about what defines a species even within distinct sub disciplines The literature of paleobiology in particular is littered with qualifiers and cautions about applying the term to the fossil record or equating such species with those recognized among living organisms In *Species and Speciation in the Fossil Record* experts in the field examine how they conceive of species of fossil animals and consider the implications these different approaches have for thinking about species in the context of macroevolution After outlining views of the Modern Synthesis of evolutionary disciplines and detailing the development within paleobiology of quantitative methods for documenting and analyzing variation within fossil assemblages contributors explore the challenges of recognizing and defining species from fossil specimens and offer potential solutions Addressing both the tempo and mode of speciation over time they show how with careful interpretation and a clear species concept fossil species may be sufficiently robust for meaningful paleobiological analyses Indeed they demonstrate that the species concept if more refined could unearth a wealth of information about the interplay between species origins and extinctions between local and global climate change and greatly deepen our understanding of the evolution of life *Human Evolutionary Genetics* Mark Jobling, Matthew Hurles, Chris Tyler-Smith, 2013-06-25 *Human Evolutionary Genetics* is a groundbreaking text which for the first time brings together molecular genetics and genomics to the study of the origins and movements of human populations Starting with an overview of molecular genomics for the non specialist which can be a useful review for those with a more genetic background the book shows how data from the post genomic era can be used to examine human origins and the human colonization of the planet richly illustrated with genetic trees and global maps For the first time in a textbook the authors outline how genetic data and the understanding of our origins which emerges can be applied to contemporary population analyses including genealogies forensics and medicine Frontiers in Ecology and Evolution 2019 Highlights Mark A. Honeycutt, 2021-09-13 **The Adaptive Value of Languages: Non-Linguistic Causes of Language Diversity** Antonio Benítez-Burraco, Steven Moran, 2018-11-08 The goal of this eBook is to shed light on the non linguistic causes of language diversity and in particular to explore the possibility that some aspects of the structure of languages may result from an adaptation to the natural and or human made environment Traditionally language diversity has been claimed to result from random internally motivated changes in language structure However ongoing research suggests instead that different factors that are external to language can promote language change and ultimately account for aspects of language diversity specifically features of the social and physical environments The contributions in this eBook discuss whether some aspects of languages are an adaptation to ecological social or even technological niches Английский язык для экологов Станислав Буковский, Рубен Агаджанян, 2024-08-05 05 03 06 05 04 06 **Language Evolution** Salikoko S. Mufwene, 2008-03-31 Languages are constantly changing New words are added to the English language every year either borrowed or coined and there is often railing against the decline of the language by public figures Some languages such as French and Finnish have academies to protect them against foreign imports Yet languages are species like constructs which evolve naturally over time Migration imperialism and globalization have blurred boundaries between many of them producing new ones such as creoles and driving some to extinction This book examines the processes by which languages change from the macroecological perspective of competition and natural selection In a series of chapters Salikoko Mufwene examines such themes as natural selection in language the actuation question and the invisible hand that drives evolution multilingualism and language contact language birth and language death the emergence of Creoles and Pidgins the varying impacts of colonization and globalization on language vitality This comprehensive examination of the organic evolution of language will be essential reading for graduate and senior undergraduate students and for researchers on the social dynamics of language variation and change language vitality and death and even the origins
