Strusevich,Kabir Rustogi,2016-10-18 In scheduling theory the models that have attracted considerable attention during the last two decades allow the processing times to be variable i e to be subjected to various effects that make the actual processing time of a job dependent on its location in a schedule The impact of these effects includes but is not limited to deterioration and learning Under the first type of effect the later a job is scheduled the longer its actual processing time becomes In the case of learning delaying a job will result in shorter processing times Scheduling with Time Changing Effects and Rate Modifying Activities

covers and advances the state of the art research in this area The book focuses on single machine and parallel machine scheduling problems to minimize either the maximum completion time or the sum of completion times of all jobs provided that the processing times are subject to various effects Models that describe deterioration learning and general non monotone effects to be considered include positional start time dependent cumulative and their combinations which cover most of the traditionally used models The authors also consider more enhanced models in which the decision maker may insert certain Rate Modifying Activities RMA on processing machines such as for example maintenance or rest periods In any case the processing times of jobs are not only dependent on effects mentioned above but also on the place of a job in a schedule relative to an RMA For most of the enhanced models described in the book polynomial time algorithms are presented which are based on similar algorithmic ideas such as reduction to linear assignment problems in a full form or in a reduced form discrete convexity and controlled generation of options *Windows Server 2012 R2 Pocket Consultant Volume 1* William Stanek,2014-03-15 Portable and precise this pocket sized guide delivers ready answers for core configuration and administrative tasks in Windows Server 2012 R2 Zero in on the essentials through quick reference tables instructions and lists You ll get the focused information you need to save time and get the job done whether at your desk or in the field Coverage includes Administration overview Managing servers running Windows Server 2012 R2 Monitoring services processes and events Automating administrative tasks policies and procedures Enhancing computer security Using Active Directory Core Active Directory administration Creating user and group accounts Managing existing user and group accounts **Linux Administrator Street Smarts** Roderick W.
