Cyber Security Politics Myriam Dunn Cavelty, Andreas Wenger, 2022-02-15. This book examines new and challenging political aspects of cyber security and presents it as an issue defined by socio-technological uncertainty and political fragmentation. Structured along two broad themes and providing empirical examples for how socio-technical changes and political responses interact, the first part of the book looks at the current use of cyber space in conflictual settings while the second focuses on political responses by state and non-state actors in an environment defined by uncertainties. Within this it highlights four key debates that encapsulate the complexities and paradoxes of cyber security politics from a Western perspective: how much political influence states can achieve via cyber operations and what context factors condition the limited strategic utility of such operations; the role of emerging digital technologies and how the dynamics of the tech innovation process reinforce the fragmentation of the governance space; how states attempt to uphold stability in cyberspace and more generally in their strategic relations; and how the shared responsibility of state, economy and society for cyber security continues to be re-negotiated in an increasingly trans-sectoral and transnational governance space. This book will be of much interest to students of cyber security, global governance, technology studies and international relations.
