Proceedings of the 9th International Conference on Physical and Mathematical Modelling of Earth and Environmental Processes Vladimir Karev, 2004-06-25 This book presents short papers of participants of the 9th International Scientific Conference School for Young Scientists Physical and Mathematical Modeling of Earth and Environment Processes A special focus is given to the extraction of hydrocarbon resources including from unconventional sources An alternative to the use of hydrocarbons as a main source of energy on the Planet in the coming decades is unlikely to be found At the same time the resource base of hydrocarbons is quickly depleted in particularly large and accessible oil and gas fields The shale oil and gas Arctic hydrocarbon stocks gas hydrates coal bed methane oil and gas from deep horizons can become new sources Deep oil may be the most promising source of expanding the resource base of hydrocarbons according to many experts New technologies are required to their development Efficient low cost technologies can be created on the basis of geomechanical approach i e through the use of a huge elastic energy stored in the rock massif due to rock pressure The creation of new breakthrough approaches to the development of hydrocarbon fields is very important in today s geopolitical conditions and

requires the involvement of young minds and strength International activities including the youth scientific schools can become an effective tool for exchange of information and the organizing of interdisciplinary research of processes in geo environment The book presents the new results of the experimental and theoretical modeling of deformation fracture and filtration processes in the rocks in connection to issues of creating scientific fundamentals for new hydrocarbon production technologies The investigations of the dependence of well stability and permeability of rocks on the stress strain state in conditions of deep horizons and high rock pressure are also represented

More than a Glitch Meredith Broussard,2023-03-14 When technology reinforces inequality it s not just a glitch it s a signal that we need to

redesign our systems to create a more equitable world The word glitch implies an incidental error as easy to patch up as it is to identify But what if racism sexism and ableism aren't just bugs in mostly functional machinery what if they're coded into the system itself In the vein of heavy hitters such as Safiya Umoja Noble Cathy O'Neil and Ruha Benjamin Meredith Broussard demonstrates in *More Than a Glitch* how neutrality in tech is a myth and why algorithms need to be held accountable Broussard a data scientist and one of the few Black female researchers in artificial intelligence masterfully synthesizes concepts from computer science and sociology She explores a range of examples from facial recognition technology trained only to recognize lighter skin tones to mortgage approval algorithms that encourage discriminatory lending to the dangerous feedback loops that arise when medical diagnostic algorithms are trained on insufficiently diverse data Even when such technologies are designed with good intentions Broussard shows fallible humans develop programs that can result in devastating consequences Broussard argues that the solution isn't to make omnipresent tech more inclusive but to root out the algorithms that target certain demographics as other to begin with With sweeping implications for fields ranging from jurisprudence to medicine the ground-breaking insights of *More Than a Glitch* are essential reading for anyone invested in building a more equitable future
