Plant Biodiversity Science in the Era of Artificial Intelligence Pierre Bonnet, Alexis Joly, Charles Davis, 2022-11-15

Morphological Plant Modeling: Unleashing Geometric and Topological Potential within the Plant Sciences

Alexander Bucksch, Dan Chitwood, 2017-10-13 An increasing population faces the growing demand for agricultural products and accurate global climate models that account for individual plant morphologies to predict favorable human habitat Both demands are rooted in an improved understanding of the mechanistic origins of plant development Such understanding requires geometric and topological descriptors to characterize the phenotype of plants and its link to genotypes However the current plant phenotyping framework relies on simple length and diameter measurements which fail to capture the exquisite architecture of plants The Research Topic Morphological Plant Modeling Unleashing Geometric and Topological Potential within the Plant Sciences is the result of a workshop held at National Institute for Mathematical and Biological Synthesis NIMBioS in Knoxville Tennessee From 2-4 September 2015 over 40 scientists from mathematics computer science engineering physics and biology came together to set new frontiers in combining plant phenotyping with recent results from shape theory at the interface of geometry and topology In doing so the Research Topic synthesizes the views from multiple

disciplines to reveal the potential of new mathematical concepts to analyze and quantify the relationship between morphological plant features. As such, the Research Topic bundles examples of new mathematical techniques including persistent homology, graph theory, and shape statistics to tackle questions in crop breeding, developmental biology, and vegetation modeling. The challenge to model plant morphology under field conditions is a central theme of the included papers to address the problems of climate change and food security that require the integration of plant biology and mathematics from geometry and topology research applied to imaging and simulation techniques. The introductory white paper written by the workshop participants identifies future directions in research, education, and policy making to integrate biological and mathematical approaches and to strengthen research at the interface of both disciplines. **Precision**

agriculture '19 John V. Stafford, 2023-08-07 Precision agriculture is a reality in agriculture and is playing a key role as the industry comes to terms with the environment, market forces, quality requirements, traceability, vehicle guidance, and crop management. Research continues to be necessary and needs to be reported and disseminated to a wide audience. These proceedings contain reviewed papers presented at the 12th European Conference on Precision Agriculture held at Montpellier SupAgro, France. The papers reflect the wide range of disciplines that impinge on precision agriculture: technology, crop science, soil science, agronomy, information technology, decision support, remote sensing, and others. The broad range of research topics reported will be a valuable resource for researchers, advisors, teachers, and professionals in agriculture long after the conference has finished. **3D Imaging, Analysis and Applications** Yonghuai Liu, Nick

Pears, Paul L. Rosin, Patrik Huber, 2020-09-11 This textbook is designed for postgraduate studies in the field of 3D Computer Vision. It also provides a useful reference for industrial practitioners, for example in the areas of 3D data capture, computer-aided geometric modelling, and industrial quality assurance. This second edition is a significant upgrade of existing topics with novel findings. Additionally, it has new material covering consumer-grade RGB-D cameras, 3D morphable models, deep learning on 3D datasets, as well as new applications in the 3D digitization of cultural heritage and the 3D phenotyping of crops. Overall, the book covers three main areas: 3D imaging including passive 3D imaging, active triangulation, 3D imaging active time of flight, 3D imaging consumer RGB-D cameras, and 3D data representation and visualisation; 3D shape analysis including local descriptors, registration, matching, 3D morphable models, and deep learning on 3D datasets; and 3D applications including 3D face recognition, cultural heritage, and 3D phenotyping of plants. 3D computer vision is a rapidly advancing area in computer science. There are many real-world applications that demand high performance 3D imaging and analysis, and as a result, many new techniques and commercial products have been developed. However, many challenges remain on how to analyse the captured data in a way that is sufficiently fast, robust, and accurate for the application. Such challenges include metrology, semantic segmentation, classification, and recognition. Thus, 3D imaging analysis and their applications remain a highly active research field that will continue to attract intensive attention from the research
