Superintendent of Documents, 1976 **Best practice guidelines for the rehabilitation and translocation of gibbons** International Union for the Conservation of Nature and Natural Resources (IUCN), Clare O. Campbell, Susan M. Cheyne, Benjamin M. Rawson, 2015-05-28 Rehabilitation and translocation programmes are increasingly becoming an important component of conservation action plans for threatened species Translocation can help address gibbon conservation issues gibbons are recognized as one of the most threatened primate families globally by allowing gibbons held in captivity to be rescued rehabilitated and then returned to the wild These guidelines for the translocation of gibbons have been developed in collaboration with stakeholders in hylobatid conservation This process was initiated during a workshop on gibbon rehabilitation reintroduction and translocation facilitated by the IUCN SSC PSG Section on Small Apes SSA and the result of

this process is the current document which is based on shared knowledge and experience to date The guidelines are designed to be a practical and useful document available for all stakeholders with the aim of equipping field projects and decision makers with the tools for scientifically sound practice in gibbon rehabilitation and translocation

Theoretical Aspects of Evolutionary Computing Leila Kallel, Bart Naudts, Alex Rogers, 2013-03-09 During the first week of September 1999 the Second EvoNet Summer School on Theoretical Aspects of Evolutionary Computing was held at the Middelheim campus of the University of Antwerp Belgium Originally intended as a small get together of PhD students interested in the theory of evolutionary computing the summer school grew to become a successful combination of a four day workshop with over twenty researchers in the field and a two day lecture series open to a wider audience This book is based on the lectures and workshop contributions of this summer school Its first part consists of tutorial papers which introduce the reader to a number of important directions in the theory of evolutionary computing The tutorials are at graduate level and assume only a basic background in mathematics and computer science No prior knowledge of evolutionary computing or its theory is necessary The second part of the book consists of technical papers selected from the workshop contributions A number of them build on the material of the tutorials exploring the theory to research level Other technical papers may require a visit to the library

Human Infancy Daniel G. Freedman, 2016-07-07 Originally published in 1974 this volume is primarily devoted to what is known about human infancy from an ethological evolutionary viewpoint Included are discussions of pan specific traits presumably shared by all infants individual genetic variations on these behaviours as judged by twin studies sex differences presumably shared by infants of all ethnic groups and genetically based ethnic differences However the author favours neither biological determinism nor cultural determinism and does not consider interactionism to be a viable solution Instead a monistic position is taken stressing the inseparability of the innate and the acquired of genetics and environment and of biology and culture The heredity environment issue is tackled head on throughout the volume The interaction between the two an implied dualism is described as a statistical abstraction from measured populations while the position here is that heredity and environment are not separable in any single organism In the same vein the author argues that on logical grounds everything one does every cultural act has within it some biological component

Eco-Evolutionary Dynamics Andrew P. Hendry, 2016-11-22 In recent years scientists have realized that evolution can occur on timescales much shorter than the long lapse of ages emphasized by Darwin in fact evolutionary change is occurring all around us all the time This book provides an authoritative and accessible introduction to eco evolutionary dynamics a cutting edge new field that seeks to unify evolution and ecology into a common conceptual framework focusing on rapid and dynamic environmental and evolutionary change Andrew Hendry covers key aspects of evolution ecology and their interactions Topics range from natural selection adaptive divergence ecological speciation and gene flow to population and community dynamics ecosystem function plasticity and genomics Hendry evaluates conceptual and methodological approaches and draws on empirical data from

natural populations including those in human disturbed environments to tackle a number of classic and emerging research questions He also discusses exciting new directions for future research at the intersection of ecology and evolution An invaluable guide for students and researchers alike Eco evolutionary Dynamics reveals how evolution and ecology interact strongly on short timescales to shape the world we see around us
