Parametric Cost Modeling for Buildings Donald E. Parker,2014-05-23 Successful cost management and value engineering in construction is based on accurate and early estimations of cost and this book is the quickest route to creating a cost plan from scratch The budgeting system described in this book will help the reader to document project scope at a level that provides excellent cost control at design stage establish the parameters of potential sites before selecting one determine the amount of financing needed before deciding to bid on a project make a detailed and robust building project budget determine the rental rate necessary to see if a building project will be marketable The technique used is a parametric cost system not the square foot cost system used by most who quote an up front building cost To help calculate the parameter quantities and price them as quantified this book comes with 5 electronic templates to calculate program scope i e space configuration HVAC loads plumbing and electrical It also includes the author s parametric cost database and cost template to prepare the construction estimate a soft cost template to price out all related program costs convert them to a monthly cash flow incorporate financing costs and then reveal the final budget an operation and maintenance annual cost template to calculate those variable and fixed costs necessary to run the building and then convert the result into the necessary rental rate to capitalize all costs The spreadsheets data advice and templates are all introduced through a detailed case study placing everything in an easy to understand practical context This will prove an invaluable guide not only for estimators and cost engineers but also developers clients and architects

**Geothermal Energy** Mary H. Dickson,Mario Fanelli,2013-07-04

Geothermal energy refers to the heat contained within the Earth that generates geological phenomena on a planetary scale Today this term is often associated with man s efforts to tap into this vast energy source Geothermal Energy utilization and technology is a detailed reference text describing the various methods and technologies used to exploit the earth s heat Beginning with an overview of geothermal energy and the state of the art leading international experts in the field cover the main applications of geothermal energy including electricity generation space and district heating space cooling greenhouse heating aquaculture industrial applications The final third of the book focuses upon environmental impact and economic

financial and legal considerations providing a comprehensive review of these topics Each chapter is written by a different author but to a set style beginning with aims and objectives and ending with references self assessment questions and answers Case studies are included throughout Whilst written primarily for professionals and students interested in learning more about geothermal energy the book also offers those new to the field and the general geothermal community an opportunity to understand and review the potential of this exciting alternative energy source Published with UNESCO

**Electrical Costs with Rsmeans Data** Rsmeans,2019-10 Resources for all types of estimators including contractors designers and engineers The latest costs for green building materials including LED light fixtures wind turbines electrical meters car charging stations and more Solar Energy Andy Walker,2013-08-07 Solar Energy is an authoritative reference on the design of solar energy systems in building projects with applications operating principles and simple tools for the construction engineering and design professional The book simplifies the solar design and engineering process providing sample documentation and special tools that provide all the information needed for the complete design of a solar energy system for buildings to enable mainstream MEP and design firms and not just solar energy specialists to meet the growing demand for solar energy systems in building projects **Fundamentals of Geothermal Heat Pump Systems** Louis Lamarche,2023-10-05 Fundamentals of Geothermal Heat Pump Systems Design and Application is written for upper level undergraduate and graduate courses in renewable energy and heat transfer This classroom tested text covers ground heat exchanger modeling secondary loop ground source system design pumping energy thermal response testing commercial building applications and horizontal and groundwater ground heat exchangers The book is oriented to practical applications including the economic analysis of ground source heat pump GSHP systems but more theoretical sections are provided covering research related geothermal applications Chapters on heat transfer fundamentals and heat pump concepts are included for readers less familiar with thermal engineering concepts A chapter covering the economic analysis of GSHP systems is also included All of the examples and problems in the book are solved using the open source Python programming language The book will provide students in geothermal energy courses with a solid understanding of the subject It will also be a valuable reference for professionals working in the field of renewable energy **Mechanical & Electrical Cost Data** Robert Snow Means Company,1981 Energy Efficiency in Buildings José Manuel Andújar,Sergio Gómez Melgar,2020-04-28 Buildings are one of the main causes of the emission of greenhouse gases in the world Europe alone is responsible for more than 30% of emissions or about 900 million tons of CO<sub>2</sub> per year Heating and air conditioning are the main cause of greenhouse gas emissions in buildings Most buildings currently in use were built with poor energy efficiency criteria or depending on the country and the date of construction none at all Therefore regardless of whether construction regulations are becoming stricter the real challenge nowadays is the energy rehabilitation of existing buildings It is currently a priority to reduce or ideally eliminate the waste of energy in buildings and at the same time supply the necessary energy

through renewable sources The first can be achieved by improving the architectural design construction methods and materials used as well as the efficiency of the facilities and systems the second can be achieved through the integration of renewable energy wind solar geothermal etc in buildings In any case regardless of whether the energy used is renewable or not the efficiency must always be taken into account The most profitable and clean energy is that which is not consumed
