

organelles: small membrane-bound structural units within cells that carry out specific functions, e.g. mitochondria carry out respiration

→ KEY QUESTIONS

- 1 Why are cells important in biology?
- 2 Describe three ways cells can vary in their outside appearance.

Answers ➤ p. 15

- Cells are classified as either **prokaryotic** or **eukaryotic**. Prokaryotic cells are smaller, simpler and considered primitive.
- Prokaryotic and eukaryotic cells have some features in common but can be readily distinguished by observing their size and structure.

Figure 1.2 Venn diagram showing relationship between prokaryotic and eukaryotic cells

Prokaryotic cells

Prokaryotic organisms include a range of types of bacteria, some of which live in 'extreme' environments such as highly salty, hot, acidic, alkaline or without oxygen and may be called 'extremophiles'. They are mainly unicellular.

Figure 1.3 Prokaryotic cell

- Prokaryotic cells reproduce by **binary fission**. They have:
 - a cellular membrane and cytoplasm
 - no membrane-enclosed organelles
 - **genetic material** (DNA) in a region called the nucleoid; DNA (deoxyribonucleic acid) may be in a circular chromosome and also sometimes in small circular plasmids
 - ribosomes
 - a cell wall often surrounded by a capsule and projections such as flagella and pili.

prokaryotic cells: cells without a nucleus, organelles or internal membranes, such as bacteria

eukaryotic cells: cells that contain a nucleus, organelles and genetic material on linear chromosomes

binary fission: cell division that occurs after the genetic material has replicated and the cell increased in volume; each copy of DNA attaches to the cell membrane at different ends and the membrane pinches in to form two daughter cells

genetic material: DNA is the large molecule (called a biomacromolecule) that stores coded information which is passed on from one generation to the next

Eukaryotic cells

- Eukaryotic organisms include all plants, animals, fungi (multicellular organisms) as well as **protists** (unicellular or colonial organisms).
- They may develop specialised structures and functions to enable coordinated activities needed in colonial or multicellular organisms.
- Eukaryotic cells reproduce by mitosis. They have:
 - a cellular membrane and cytoplasm
 - a nucleus that contains the genetic material (DNA) on linear chromosomes
 - ribosomes
 - a variety of membrane-bound organelles and vesicles
 - a cytoskeleton of microtubules and microfibers.

protists: a loosely associated group of unicellular or colonial eukaryotic organisms, e.g. protozoans such as amoeba

→ KEY QUESTIONS

- 3 Identify the two main types of cell.
- 4 Which type of cell contains nuclei?
- 5 Compare prokaryotic and eukaryotic cells.

Theodore M. Porter, 2018-06-05 The untold story of how hereditary data in mental hospitals gave rise to the science of human heredity In the early 1800s a century before there was any concept of the gene physicians in insane asylums began to record causes of madness in their admission books Almost from the beginning they pointed to heredity as the most important of these causes As doctors and state officials steadily lost faith in the capacity of asylum care to stem the terrible increase of insanity they began emphasizing the need to curb the reproduction of the insane They became obsessed with identifying weak or tainted families and anticipating the outcomes of their marriages *Genetics in the Madhouse* is the untold story of how the collection and sorting of hereditary data in mental hospitals schools for feeble-minded children and prisons gave rise to a new science of human heredity In this compelling book Theodore Porter draws on untapped archival evidence from across Europe and North America to bring to light the hidden history behind modern genetics He looks at the institutional use of pedigree charts censuses of mental illness medical social surveys and other data techniques innovative quantitative practices that were worked out in the madhouse long before the manipulation of DNA became possible in the lab Porter argues that asylum doctors developed many of the ideologies and methods of what would come to be known as eugenics and deepens our appreciation of the moral issues at stake in data work conducted on the border of subjectivity and science A bold rethinking of asylum work *Genetics in the Madhouse* shows how heredity was a human science as well as a medical and biological one *Integrative Biology of Women's Health* Espen E. Spangenburg, 2013-10-24 Defining and understanding cellular and molecular mechanisms that are relevant to women's health has become a critical area of scientific pursuit Until recently very little effort has been placed on defining or understanding critical differences between women and men that may be critical to the overall health of the woman In 1990 the National Institutes of Health recognized this gap in knowledge

resulting in the creation of the Office of Research on Women's Health. One of the purposes of this office was to advance the understanding of health issues from the women's perspective from both a basic and clinical scientific perspective. From a scientific evolution of understanding, the existence of this office is new and thus there has not been enough time for new information to integrate itself in our current scientific thought process. This book will seek to capture and disseminate our current understanding of scientific advancements relevant to women's health and provide the information to a broad audience. The purpose of this work is to discuss recent advancements in basic science across three areas of concern for women's health. In addition, the book will provide translational chapters that attempt to place the basic science work in context within our current understanding of the human. Although it is well acknowledged that gender differences exist across organ function, which translates into differences in whole body function, until recently little effort has been made to define basic mechanisms within various tissues within the woman. This work will focus on recent scientific findings that are relevant to women's health and to provide novel and relevant information to interested scientists and clinicians.
