Linear Inequalities

To graph an inequality, graph the line and find the solution region by substituting a test point. The point $(0, 0)$ is a good one unless the line goes through the origin.

Problem

What is the graph of $y > 2x - 3$?

Begin by graphing the line $y = 2x - 3$. Take random values for x , find the corresponding y values, and create a table.

x	$y = 2x - 3$
-2	-7
-1	-5
0	-3
1	-1
2	1

The ordered pairs are $(-2, -7)$, $(-1, -5)$, $(0, -3)$, $(1, -1)$, and $(2, 1)$. You can graph the line using these points. The line should be dashed because the inequality symbol is $>$.

To determine which region to shade, substitute $(0, 0)$ into the inequality to see if it is a solution.

$$\begin{aligned} y &> 2x - 3 \\ 0 &\stackrel{?}{>} 2(0) - 3 \\ 0 &> -3 \quad \checkmark \end{aligned}$$

The point $(0, 0)$ satisfies the inequality and is above the line. Therefore, shade the region above the line, which is the solution region.

Exercises

Graph each linear inequality.

1. $y < x + 2$

2. $y > 3x - 4$

3. $x + y < -3$

4. $x - 2y > -1$

Math Education for America? Mark Wolfmeyer, 2013-12-04 Math Education for America analyzes math education policy through the social network of individuals and private and public organizations that influence it in the United States The effort to standardize a national mathematics curriculum for public schools in the U S culminated in 2010 when over 40 states adopted the Common Core State Standards for Mathematics Rather than looking at the text of specific policy documents this book complements existing critical reviews of the national math education curriculum by employing a unique social network analysis Breaking new ground in detailing and theorizing the politics of math education Wolfmeyer argues that the private interests of this network are closely tied to a web of interrelated developments human capital education policy debates over traditional and reform pedagogy the assumed content knowledge deficit of math teachers and the proliferation of profit driven educational businesses By establishing the interconnectedness of these interests with the national math education curriculum he shows how the purported goals of math

education reform are aligned with the prevailing political agendas of this social network rather than the national interest
