Low-Power Wireless Communication Circuits and Systems Kiat Seng Yeo, Kaixue Ma, 2018-05-03 The increasing demand for extremely high data rate communications has urged researchers to develop new communication systems Currently wireless

transmission with more than one Giga bits per second Gbps data rates is becoming essential due to increased connectivity between different portable and smart devices To realize Gbps data rates millimeter wave MMW bands around 60 GHz is attractive due to the availability of large bandwidth of 9 GHz Recent research work in the Gbps data rates around 60 GHz band has focused on short range indoor applications such as uncompressed video transfer high speed file transfer between electronic devices and communication to and from kiosk Many of these applications are limited to 10 m or less because of the huge free space path loss and oxygen absorption for 60 GHz band MMW signal This book introduces new knowledge and novel circuit techniques to design low power MMW circuits and systems It also focuses on unlocking the potential applications of the 60 GHz band for high speed outdoor applications The innovative design application significantly improves and enables high data rate low cost communication links between two access points seamlessly The 60 GHz transceiver system on chip provides an alternative solution to upgrade existing networks without introducing any building renovation or external network laying works

Surrogate Modeling For High-frequency Design: Recent Advances Slawomir Koziel, Anna Pietrenko-dabrowska, 2022-03-04 Contemporary high frequency engineering design heavily relies on full wave electromagnetic EM analysis This is primarily due to its versatility and ability to account for phenomena that are important from the point of view of system performance Unfortunately versatility comes at the price of a high computational cost of accurate evaluation Consequently utilization of simulation models in the design processes is challenging although highly desirable The aforementioned problems can be alleviated by means of surrogate modeling techniques the most popular of which are data driven models Although a large variety of methods are available they are all affected by the curse of dimensionality This is especially pronounced in high frequency electronics where typical system responses are highly nonlinear Construction of practically useful surrogates covering wide ranges of parameters and operating conditions is a considerable challenge Surrogate Modeling for High Frequency Design presents a selection of works representing recent advancements in surrogate modeling and their applications to high frequency design Some chapters provide a review of specific topics such as neural network modeling of microwave components while others describe recent attempts to improve existing modeling methodologies Furthermore the book features numerous applications of surrogate modeling methodologies to design optimization and uncertainty quantification of antenna microwave and analog RF circuits
