

GLOSSARY

Understanding the meaning of common terms in the PDO HSE-MS / CP-122 is an essential part of professional HSE management.

It is important that PDO establish its own documented definitions and terms for relevant HSE management system terminology, so as to reduce the potential for reporting and other communication problems.

This glossary is not exhaustive, and the definitions and abbreviations provided here are for reference only.

Accident - The term "accident" is sometimes used to describe an incident which has caused actual injury, loss, or damage. For the purposes of PDO procedures the term "accident" shall not be used. (See *incident*. The following definitions beginning with the term "accident" are for illustrative purposes only and the term "incident" can be substituted for "accident" here.).

Accident / incident rates - Measures of accident / incident loss experience within given time periods, developed as a means of comparison. (Examples: injury frequency rate, injury severity rate, injury index, all injury frequency rate, major property damage rate, and critical items damage rate).

Accident report - A written summary describing the accident / incident, presenting an analysis of causes and suggestions for remedial action, and documenting actions taken as preventive or control measures.

Accident / incident analysis - Study of accident / incident experience through compilation of related facts and information about the nature of injuries and/or damage, and the causal factors. The purpose is to define trends and problem areas and to identify the critical safety problems as a basis for program objectives and activities. Analyses usually include frequency of occurrence, severity, nature of injury / damage, part of body injured, part of equipment or material damaged, agency of the accident, substandard practices and conditions, job factors and personal factors. Refer to *Basic Causes* and *Immediate Causes*.

Accident / incident investigation - A systematic search for factual information on the extent and nature of a specific loss or near-miss, the related events, the substandard practices and conditions which influenced the events, the basic or roots causes, and the management actions needed to prevent or control future occurrences.

AI-PS - Asset Integrity Process Safety.

AISALT - Asset Integrity Process Safety Asset Leadership Team.

ALARP - As Low As Reasonably Practicable (ALARP). Risks are said to be reduced to a level of ALARP, at a point where the time, trouble, complexity, difficulty, and cost of risk reduction measures have been assessed, and where further risk reduction measures are considered to be unreasonable in regard to the additional risk reductions obtained versus the costs and benefits of doing so.

All - This term generally refers to a 100% condition. The established method to evaluate an "all" condition is to apply the "3 strikes rule." The "3 strikes rule" means that the third time a deviation is noted, the "all" condition will not be true. (From the HSE-MS Framework Scorecard [FSC]).

Aspect - The potential to harm people and the environment, cause damage and/or loss of assets, and adversely impact PDO's reputation. (See *Hazard*). When used in conjunction with environment, as environmental aspect, it has a slightly different meaning (see *Environmental aspect*).

Assessment - (1) A comprehensive, systematic assessment of performance to established and accepted criteria.
