Bursten, Catherine Murphy, Patrick Woodward, Steven Langford, Dalius Sagatys, Adrian George, 2013-10-04 If you think you know the Brown LeMay Bursten Chemistry text think again In response to market request we have created the third Australian edition of the US bestseller Chemistry The Central Science An extensive revision has taken this text to new heights Triple checked for scientific accuracy and consistency this edition is a more seamless and cohesive product yet retains the clarity innovative pedagogy functional problem solving and visuals of the previous version All artwork and images are now consistent in quality across the entire text And with a more traditional and logical organisation of the Organic Chemistry content this comprehensive text is the source of all the information and practice problems students are likely to need for conceptual understanding development of problem solving skills reference and test preparation Kinetics and Mechanism John W. Moore, Ralph G. Pearson, 1981-09-30 The third edition of a classic text originally by Frost and Pearson that describes the fundamental principles and established practices that apply to the study and the rates and mechanisms of homogeneous chemical reactions in the gas phase and in solution Incorporates new advances made during the past 20 years in the study of individual molecular collisions by molecular beam laser applications to experimental kinetics theoretical treatments of reaction rates and our understanding of the principles that govern rates of reaction in solution Presents numerous examples of the deduction of mechanism from experiment including intimate details such as stereochemistry and the dependence of reaction pathway on the exact energy states of reacting particles

Organometallic Chemistry
E W Abel, F G A Stone, 2007-10-31
Organometallic chemistry is an interdisciplinary science which continues to grow at a rapid pace
Although there is continued interest in synthetic and structural studies the last decade has seen a growing interest in the potential of organometallic chemistry to provide answers to problems in catalysis
synthetic organic chemistry and also in the development of new materials
This Specialist Periodical Report aims to reflect these current interests reviewing progress in theoretical organometallic chemistry
main group chemistry the lanthanides and all aspects of transition metal chemistry
Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research
Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in-depth accounts of progress in particular areas of chemistry
For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports
However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born
The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry
For more general coverage of the highlights in chemistry they remain a must
Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry
Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued
The current list of Specialist Periodical Reports can be seen on the inside flap of this volume
