Drug Discovery Stories Bin Yu, Peng

Zhan,2024-10-25 *Drug Discovery Stories From Bench to Bedside* presents a collection of cases on the development of highly successful pharmaceuticals. It delves into the realm of drug discovery exploring the structural biology and biological functions of the sought after targets. The book covers the identification of promising compounds, their transformation from hits to leads through meticulous optimization, and the elucidation of how key compounds interact with the target in essence providing invaluable insights for drug design. Additionally, it covers essential information such as the pivotal biological and PK data of lead compounds, any noteworthy clinical results, and a comprehensive overview of other candidate compounds. The field of drug discovery and development has experienced rapid evolution with numerous new drugs receiving approval each year. While several books have been published on this subject, there is a pressing need for a new book series that accurately reflects the current advancements in drug discovery. This book aims to not only cater to the drug discovery community but also engage other communities involved in chemical biology, synthetic chemistry, and pharmacology. Analyzes the drug discovery stories of different blockbuster drugs. Includes the newly approved drugs. Covers key aspects related to the drug development of the drugs.

Autoimmune and Autoinflammatory Diseases: from Genes to Metabolites in the Discovery of Predictive, Diagnostic and Therapeutic Targets. Evangelia Sarandi, Dimitris Tsoukalas, Vassileios Fragoulakis, Aristidis M. Tsatsakis, 2025-02-07. Autoimmune and autoinflammatory diseases are increasingly being recognized as an important health challenge with a significant impact on patient's quality of life. Early diagnosis is a key determinant of the progression and proper management of these diseases. Ongoing research advancements have led to the implementation of omics techniques such as genomics and metabolomics to identify disease biomarkers that could serve as potential diagnostic and therapeutic targets. However, their translation to clinical practice is being hampered by the lack of validated and reproducible results. In addition, the unraveling of the aetiopathogenetic mechanisms leading to the onset of these diseases will provide new insights in the prevention, prediction, and treatment of autoimmune and autoinflammatory diseases.

Low-Cost Solar Electric Power Lewis M. Fraas, Mark J. O'Neill, 2023-07-25. This book describes recent breakthroughs that promise major cost reductions in solar energy production in a clear and highly accessible manner. The authors address the three key areas that have commonly resulted in criticism of solar energy in the past: cost, availability, and variability. Coverage includes cutting edge information on recently developed 40% efficient solar cells which can produce double the power of currently available commercial cells. The discussion also highlights the potentially transformative emergence of opportunities for integration of solar energy storage and natural gas combined heat and power systems. Solar energy production in the evening hours is also given fresh consideration via the convergence of low cost access to space and the growing number of large terrestrial solar electric power fields around the world. Dr. Fraas has been active in the

development of Solar Cells and Solar Electric Power Systems for space and terrestrial applications since 1975 His research team at Boeing demonstrated the first GaAs GaSb tandem concentrator solar cell in 1989 with a world record energy conversion efficiency of 35 garnering awards from Boeing and NASA He has over 30 years of experience at Hughes Research Labs Chevron Research Co and the Boeing High Technology Center working with advanced semiconductor devices In a pioneering paper he proposed the InGaP GaInAs Ge triple junction solar cell predicting a cell terrestrial conversion efficiency of 40 at 300 suns concentration Having become today s predominant cell for space satellites that cell is now entering high volume production for terrestrial Concentrated Photovoltaic CPV systems Since joining JX Crystals Dr Fraas has pioneered the development of various thermophotovoltaic TPV systems based on the new GaSb infrared sensitive PV cell Dr Fraas holds degrees from Caltech B Sc Physics Harvard M A Applied Physics and USC Ph D EE

Targeting Key Cellular Signaling Network for Cancer Chemotherapy and Immunotherapy Bo Zhai,Zhendong Jin,Chen Yang,Gang Tian,2024-06-04 The cellular signaling network refers to the complex system formed by the interactions between various signaling molecules and receptors within and between cells It consists of multiple signaling pathways that mediate intricate cellular interactions both internally and externally The development of cancer is closely associated with the intricate signaling transduction network within cells where multiple signaling pathways are interconnected and collectively regulate the biological phenotypes of tumor cells

Characteristic clinical immune phenotypes and molecular mechanisms associated with inflammatory diseases, 2nd edition Chengjin Gao,Shuming Pan ,Kun Xiong,2024-11-06 The systemic inflammatory response is evident in inflammatory diseases and the immune system secretes many cytokines involved resulting in a robust immune response For example the pathogenesis of sepsis includes abnormal immune cell activation in the early stages as well as sepsis related immunosuppression During the immunosuppressive phase CD4 T cells CD8 T cells Th17 cells and d T cells are reduced while regulatory T cells increase At the same time T lymphocytes and neutrophils as immune effector cells interact with each other and play a key role in regulating the immune response to immune inflammatory diseases The increased release of neutrophil extracellular trap networks NETs by neutrophils leads to a significant upregulation of NETs DNA MPO which further aggravates the septic inflammatory response and organ functional impairment Therefore it is important to deeply investigate the characteristic clinical immune phenotypes and molecular mechanisms associated with inflammatory diseases and targeting therapies against them may provide new ideas for the precise treatment of diseases The goal of this Research Topic is to provide a forum to advance research on the contribution of the fundamental mechanisms of immune system development and function with special emphasis on the description and mechanism of clinical immunological phenotypes in different immune disorders and the definition of their molecular basis The Research Topic had the bullet points including but not limited to the following

1 Description of the immune phenotypes of various common acute and chronic diseases 2 The regulatory mechanisms of different factors on the development and function of the host immune system 3 Inflammatory immunological mechanisms organ function and interorgan interactions
