Thorpe, Human Identification: The Use of DNA Markers B. Weir, 1995-09-30 The ongoing debate on the use of DNA profiles to identify perpetrators in criminal investigations or fathers in paternity disputes has too often been conducted with no regard to sound statistical genetic or legal reasoning The contributors to Human Identification The Use of DNA Markers all have considerable experience in forensic science statistical genetics or jurimetrics and many of them have had to explain the scientific issues involved in using DNA profiles to judges and juries Although the authors hold differing views on some of the issues they have all produced accounts which pay due attention to the sometimes troubling issues of independence of components of the profiles and of population substructures The book presents the considerable evolution of ideas that has occurred since the 1992 Report of the National Research Council of the U S Audience Indispensable to forensic scientists laying out the concepts to all those with an interest in the use of genetic information The chapters and exhaustive bibliography are vital information for all lawyers who must prosecute or defend DNA cases and to judges trying such cases

HEMATOPATHOLOGY Q BANK

Hany Sakr, MD, 2021-12-07 For many years we have noticed the lack of a concise yet comprehensive question and answer style book that thoroughly covers hematology hematology neoplasms and coagulation disorders and renders them in an easy and digestible manner to the busy hematopathologists and fellows in training There are many excellent textbooks

written by experts in the field which are indispensable. However, and for sake of board exam cramming, these may not be the preferred source for studying. Most of the available hematology question books are case series based, and the authors refrain from following or maintaining a board exam style. Our Hematopathology Q Bank Board Style Review will be the first Q bank in the field that comprehensively covers adult and pediatric disorders in hematology, hematopathology, and coagulation subspecialties. The book falls in eleven chapters and includes 380 written questions without images, 230 questions with high resolution images, nearly 100 short case series and case studies, and 40 tables, charts, and algorithms. The contents cover both benign reactive and neoplastic conditions in hematopoietic and lymphoid systems, hematology related cytology, and FNA challenging cases, flow cytometry, cytogenetics, and molecular genetics. This is in addition to coagulation disorders and some laboratory management. The bank is full of interpretation rules and differential diagnosis tables and fact sheets for easy board cramming. Materials have been derived from up to date textbooks including the revised fourth edition of WHO classification of hematopoietic and lymphoid tumors, articles, and real time cases encountered in the laboratory. It is our sincere hope that this hematopathology review book fills a gap in the field and that hematopathology fellows in training and attending clinical pathologists find it a wealth of up to date information presented in an easy way. We hope they find this Q bank of utmost benefit in preparing for exams including both clinical pathology and hematopathology subspecialty exams.
