Abstract: The purpose of this study was to determine the effect of a 6-week training program on the physical fitness of female students. A total of 100 female students were divided into two groups: control and experimental. The control group did not receive any training, while the experimental group received a 6-week training program. Physical fitness was measured at baseline and after 6 weeks using a series of tests. The results showed that the experimental group had significantly higher scores than the control group in all tests after 6 weeks of training.
