Ramified Natural Theology in Science and Religion Rodney Holder, 2020-10-15 This book offers a rationale for a new ramified natural theology that is in dialogue with both science and historical critical study of the Bible Traditionally knowledge of God has been seen to come from two sources nature and revelation However a rigid separation between these sources cannot be maintained since what purports to be revelation cannot be accepted without qualification rational argument is needed to infer both the existence of God from nature and the particular truth claims of the Christian faith from the Bible Hence the distinction between bare natural theology and ramified natural theology The book begins with bare natural theology as background to its main focus on ramified natural theology Bayesian confirmation theory is utilised to evaluate competing hypotheses in both cases in a similar manner to that by which competing hypotheses in science can be evaluated on the basis of empirical data In this way a case is built up for the rationality of a Christian theist worldview Addressing issues of science theology and revelation in a new framework this book will be of keen interest to scholars working in Religion and Science

Since the publication of *The New Science of Astrobiology* in the year 2001 the first edition of the present book two significant events have taken place raising the subject from the beginning of the present century to its present maturity Firstly in 2001 the Galileo Mission still had two years to complete its task which turned out to be an outstanding survey of the Jovian system especially of its intriguing satellite Europa Secondly the Cassini Huygens Mission was still on its way to Saturn Its present success has surpassed all expectations of ESA and NASA Astrobiologists still did not know that Titan was the fifth body in the Solar System that possibly contained a water ocean including the Earth and the three Galilean satellites other than Io For these reasons the book includes overviews of the evolutionary and molecular biology that are necessary There is a discussion of other sectors of culture that are the natural frontiers of astrobiology especially the humanities
