General Notes about Dissections:

- Take extreme care when using dissecting instruments, particularly scalpels. Make cuts away from your body
- Cut lightly so you don't dissect what you want to see
- Keep sharp dissection tools pointing down when held in your hand
- Your fish has been preserved in a chemical solution. Wear plastic gloves and goggles at all times.
- Clean up the work area and wash your hand thoroughly when finished

Respect for living things and the environment is considered essential for meaningful work in science and technology.

physiology which have greatly influenced our understanding of fish function as well as generating questions that have yet to be resolved Fish taxa represent the largest number of vertebrates with over 25 000 extant species However much of our knowledge apart from taxonomy and habitat descriptions has been based on relatively few of them usually those which live in fresh water and or are of commercial interest Unfortunately there has also been a tendency to base our interpretation of fish physiology on that of mammalian systems as well as to rely on a few type species of fish This accessible textbook will redress the balance by using examples of fish from a wide range of species and habitats emphasizing diversity as well as recognizing shared attributes with other vertebrates
