

It is recommended that:

1. Locomotion studies be continued.
2. Studies of the functions of the upper extremity be reactivated.
3. Studies of the effects of pressure on tissues be initiated. Results of these studies will affect the design of sockets, braces, and surgical techniques.
4. A thorough review be made of the effectiveness of electromyography as a measuring instrument.
5. Further studies in soft-tissue physiology and body mechanics be carried out.

SURGICAL AND MEDICAL PROBLEMS

Insufficient attention has been given in this country to surgical techniques with respect to amputations and prostheses. Recent experiences, especially with fitting amputees immediately after surgery, have reemphasized the need for further studies in the areas enumerated below.

It is recommended that the following studies be activated:

1. Indications and contraindications for amputation surgery.
2. Determination of best level of amputation.
3. Determination of relative values of various sites of amputation, such as knee disarticulation versus short below-knee.
4. Surgical techniques--treatment of muscle, bone, nerves, etc.
5. The contributions of the various factors involved in immediate postsurgical fitting.
6. Persistent painful phantoms.
