Proteins Form And Function:

Proteins: Form and Function R.A. Bradshaw, M. Purton, 2012-12-02 Proteins are of fundamental importance in all aspects of cell structure and function. The study of proteins has always formed a central part of biochemistry and recent expansion in the range and sophistication of available techniques has provided a wealth of new information. The current methods and approaches used to gain a better understanding of the structure of proteins are described within this book while other articles focus on the role of proteins within the cell. Most of the articles have appeared previously in the monthly review journal *Trends in Biochemical Sciences* TIBS with a few commissioned specifically for this collection which should appeal to students, lecturers and researchers interested in the form and function of proteins. **Proteins** David Whitford, 2013-04-25

Proteins: Structure and Function is a comprehensive introduction to the study of proteins and their importance to modern biochemistry. Each chapter addresses the structure and function of proteins with a definitive theme designed to enhance student understanding. Opening with a brief historical overview of the subject, the book moves on to discuss the building blocks of proteins and their respective chemical and physical properties. Later chapters explore experimental and computational methods of comparing proteins, methods of protein purification and protein folding and stability. The latest developments in the field are included and key concepts introduced in a user-friendly way to ensure that students are able to grasp the essentials before moving on to more advanced study and analysis of proteins. An invaluable resource for students of Biochemistry, Molecular Biology, Medicine and Chemistry providing a modern approach to the subject of Proteins.

Proteins: Structure and Function Albert Light, 1974 *Protein Structure and Function* Gregory A. Petsko, Dagmar Ringe, 2004 Each title in the *Primers in Biology* series is constructed on a modular principle that is intended to make them easy to teach from, to learn from and to use for reference. **Proteins: Structure, Function, and Engineering** B.B. Biswas, Siddhartha Roy, 2013-06-29 Here researchers review the latest breakthroughs in protein research. Their contributions explore emerging principles and techniques and survey important classes of proteins that will play key roles in the field's future. Articles examine the possibility of a Boltzmann-like distribution in protein substructures, the new technique of Raman spectroscopy and compact intermediate states of protein folding. This well-illustrated volume also features coverage of proteins that bind nucleic acids.

The Neuronal Functions of EF-hand Ca(2+)-binding Proteins 2nd Edition Michael R. Kreutz, José R. Naranjo, Karl-Wilhelm Koch, Beat Schwaller, 2016-11-01 Ca²⁺ signaling in neurons is characterized by highly restricted and dynamic gradients called Ca²⁺ waves spikes transients and puffs depending upon their corresponding spatial and temporal features Based on this strict segmentation the Ca²⁺ ion provides a versatile basis for complex signaling in neuronal subcompartments with a spatial resolution of micro and nanodomains The multitude of Ca²⁺ regulated processes requires specialized downstream processing machinery translating the Ca²⁺ signal into alterations of cellular processes The broad range of different Ca²⁺ triggered

phenomena in neurons ranging from neurotransmission to gene expression is reflected by the existence of a multitude of different Ca²⁺ binding proteins CaBPs from which numerous belong to the EF hand super family EF hand proteins can be subdivided into Ca²⁺ buffer and Ca²⁺ sensor proteins Whereas the first group has a very high affinity for Ca²⁺ exhibits little conformational change in the Ca²⁺ bound state and is thought to mainly chelate Ca²⁺ the second group has a lower affinity for Ca²⁺ and shows considerable conformational changes upon Ca²⁺ binding which usually triggers a target interaction Neuronal calcium sensor NCS proteins and the related Caldendrin CaBP Calneuron nCaBPs proteins are members of this latter group They resemble the structure of their common ancestor Calmodulin CaM with four EF hand Ca²⁺ binding motifs of which not all are functional However despite their structural homology with CaM NCS as well as nCaBPs are quite diverse in amino acid sequence It is therefore surprising that relatively few binding partners have been identified that are not CaM targets and this raises the question of the specificity and function of these interactions In terms of function binding of NCS and nCaBP has frequently different consequences than binding of CaM which substantially increases the versatility of the Ca²⁺ tool kit The general idea of this special issue is to provide an overview on the function of neuronal EF hand calcium binding proteins in health and disease But we will not just provide a mere collection of articles to stress the function of each protein The issue will mainly deal with emerging concepts on Ca²⁺ signaling buffering mediated by EF hand Ca²⁺ binding proteins This includes questions like features that define the functional role of a EF hand calcium sensor in neurons the conditions that make physiological relevance of a given interaction of a CaBP with its target plausible the emerging synaptic role of these proteins and mounting evidence for their role in the regulation of protein trafficking Structural aspects and biophysical studies will be covered Another aspect will be the role of CaBPs in brain disease states This aspect includes studies showing that CaBPs are targets of drugs in clinical use studies showing that expression levels of calcium binding proteins are frequently altered in brain disease states as well as reports on mutations in EF hand calcium sensors linked to human disease
