Syntax, the brain, and linguistic theory: a critical reassessment, 2024-07-23 Syntax refers both to the structure of sentences and the underlying combinatorial capacity to generate this structure For some time neurolinguistic research on syntax was heavily influenced by theoretical linguistic approaches which characterize in detail the nature of syntactic representations A rough consensus has been that the primary region supporting syntax is Broca's area and that syntactic deficits in aphasia exist primarily due to damage or degeneration of this region commonly occurring in Broca's aphasia and nonfluent agrammatic PPA With respect to temporal dynamics of syntactic processing neurophysiological research on syntax focused on specific event related potentials such as the ELAN and P600 thought to index phrase structure building and syntactic reanalyses However the research landscape has changed substantially in the last several years with new methodologies and theoretical perspectives and there is little consensus on the neurobiological foundations of syntax or the role of linguistic theory in guiding research The goal of this Research Topic is to reassess our understanding of syntax and the brain in light of these developments Specifically it is designed to address the following set of major questions

Dual-Phase Depolarization Analysis Jean Pierre Ibar, 2022-05-09 This book focuses on the characterization of the amorphous phase of polymers whether they are pure amorphous or semi crystalline ones above T_g or below T_g by studying the relaxation of dipoles and space charges naturally found in their structure after they have been activated by the application of a voltage field The experimental deconvolution of the relaxation modes responsible for internal motion in the amorphous phase is coupled with a mathematical procedure Thermal Windowing Deconvolution TWD that leads to the understanding of their coupling characteristics which it is shown relate to the state of the material itself for instance its non equilibrium state or its internal stress for matter belonging to interfaces between aggregated or dispersed phases Describes quantitatively the Thermal Stimulated Depolarization techniques of polymer characterization TSD TWD i.e. how to decouple the relaxation modes collectively interacting interactive coupling and relate it to the thermodynamic properties of the amorphous phase Understands the results of depolarization in terms of the new physics of polymer interactions the Dual Phase model here applied to the dipoles space charge dynamics Provides a roster of CASE STUDIES practical applications of the TSD and TWD characterization techniques to describe coupled molecular motions in resins medical tissues wood blends and block copolymers interfaces rubbers can coatings internal stress in molded parts etc

Stanley A. Dennis, Leon Irving Thomas, 1961 *Media Education Assessment Handbook* William G. Christ, 2020-07-24 Assessing media education is a formidable task because both assessment and media education are complex and controversial concepts Assessment which can take place at the individual student class sequence program department or unit and university levels is questioned in terms of reliability validity relevance and cost Media education which has been challenged at a number of schools finds faculty and administrators in the midst of soul searching about how to clearly articulate its missions and purposes to a broader audience Departments are under increasing national state and institutional pressure to get assessment procedures carried out quickly but there is an obvious danger in rushing to implement assessment strategies before establishing what is essential in media education In communication education in general the what of assessment is often discussed in terms of skills attitudes affect values and knowledge People assess students to determine what they know think feel value and can do Here it is suggested that one of the places to start defining what students should learn from their media education is by identifying outcomes Outcomes can be assessed in a variety of ways but first they need to be developed and clearly articulated *The Christian Advocate*, 1929 **Pressure-Sensitive Adhesives and Applications** Istvan Benedek, 2004-02-03 *Pressure Sensitive Adhesives and Applications* Second Edition explains how pressure sensitive adhesives PSAs work why they are used and the technology used to manufacture them This second edition features the latest developments in the field Dr Benedek discusses the factors that affect the rheology and special flow characteristics responsible for the adhesivity of liquid and solid PSAs His book explores the viscoelastic behavior of PSAs and compares them to plastics rubbers and polymers properties and examines the parameters that influence the conversion process of PSAs from the coating of carrier materials to the properties of the final laminate The author covers adhesion cohesion balance time temperature dependence of pressure sensitivity chemical composition coating properties and coating processes affect the adhesive properties of PSA and their end products and how application specific performance indices are used to determine the formulation and manufacture of raw materials In addition up to date coating machines converting technology and environmental considerations in the manufacture of PSA final products as well as industry specific methods of testing for quality assurance and control are discussed *Pressure Sensitive Adhesives and Applications* Second Edition combines the

theoretical basis of pressure sensitivity with the practical aspects of manufacturing testing and use of PSAs Readers are offered an exhaustive as well as comparative look at the engineering of plastics adhesives and pressure sensitives resulting in an indispensable up to date reference for adhesive and polymer chemists and technologists *Commerce Business Daily* ,1997-12-31 PSA Journal ,1948 Resources in Education ,1997-04 **Project Scheduling** Jan Weglarz,2012-12-06 Project scheduling problems are generally speaking the problems of allocating scarce resources over time to perform a given set of activities The resources are nothing other than the arbitrary means which activities complete for Also the activities can have a variety of interpretations Thus project scheduling problems appear in a large spectrum of real world situations and in consequence they have been intensively studied for almost forty years Almost a decade has passed since the multi author monograph R Slowinski 1 W glarz eds *Advances in Project Scheduling* Elsevier 1989 summarizing the state of the art across project scheduling problems was published Since then considerable progress has been made in all directions of modelling and finding solutions to these problems Thus the proposal by Professor Frederick S Hillier to edit a handbook which reports on the recent advances in the field came at an exceptionally good time and motivated me to accept the challenge Fortunately almost all leading experts in the field have accepted my invitation and presented their completely new advances often combined with expository surveys Thanks to them the handbook stands a good chance of becoming a key reference point on the current state of the art in project scheduling as well as on new directions in the area The contents are divided into four parts The first one dealing with classical models exact algorithms is preceded by a proposition of the classification scheme for scheduling problems **Chemical Analysis of Non-antimicrobial Veterinary Drug Residues in Food** Jack F.
