reorganization in turn locally modifies endocytosis and or exocytosis and directs asymmetric distribution of PIN family of auxin transporters Another recent achievement is the characterization of the Rho and microtubule driven mechanism by which the cell wall architecture is established In particular the elegant work by Oda and Fukuda Science 337 p 1333 2012 provides evidence that secondary wall patterning in xylem vessel primarily relies on two processes a local activation of the plant Rho GTPase ROP11 and a mutual MIDD1 mediated inhibitory interaction between active ROP domains and cortical microtubules Additional examples include recent genetic evidence that microtubule and actin filament interacting regulatory proteins such as MAP65 1 and capping protein function as transducers of membrane lipid signaling into changes in cytoskeleton dynamics and organization This Research Topic aims at collecting a comprehensive set of articles dealing with cellular processes involving membrane cytoskeleton interactions Its scope extends beyond the specific fields defined by the above examples and includes intracellular trafficking host pathogen interactions response to biotic and abiotic stresses and hormonal regulation of growth We hope that this Research Topic will also highlight critical questions that need to be addressed in the future We welcomed Original Research Articles Technical Methodological Advances e g analysis of cytoskeleton dynamics close to membranes Reviews and Mini Reviews that can expand our understanding of how and why membranes and the cytoskeleton interact

Dynamic Personality Science. Integrating Between-Person Stability and Within-Person Change Nadin Beckmann, Robert E. Wood, 2017-12-28 Personality can be understood from at least two perspectives One focuses on stable between person differences or traits The other perspective focuses on within person differences and dynamics i e fluctuations in personality in response to situations and across time This Research Topic reflects recent developments in personality research to integrate both trait and dynamic perspectives An integrated view on personality recognizes both stability in between person differences and within person change Contributors are drawn from research teams across Europe North America and Australasia and from basic and applied fields including organizational educational and clinical The studies reported provide new evidence in support of an integrative approach highlight currently active areas of research and propose new directions of research Current streams of research include the study of contingent units of personality and within person processes underlying traits the comparisons of findings based on within vs between person data the conceptualisation and operationalization of perceived and objective change in situation variables the malleability of personality and the potential for personality interventions Integrative approaches using within person designs provide new bottom up insights into general principles of personality that explain differences between people while reflecting the complexities of within person personality dynamics at the level of the individual
