

## PSY 322 Project one milestone

The topic I chose for the research paper is the major development theories for children and adolescents. I believe this topic is relevant to adolescence and emerging adulthood development because the character of young adults is shaped by what goes on during childhood with life experiences and observations. According to Lightfoot, a theory is defined as a broad framework or set of principles that can be used to guide the collection and interpretation of a set of facts. This topic is interesting to me because as I complete my major, I'm learning more about how children and adolescents learn, behave, and think, and the theories behind it. I have two toddlers as well so it's always great to have an understanding about their feelings and what they're going through to cause them to have big feelings.

Developmentalists considered four theoretical perspectives that fell under the "Grand" theories. These theories were psychodynamic, behaviorist, constructivist, and sociocultural. "Psychodynamic theories claim a significant place in the history of developmental science, having shown how universal developmental processes and stages can be understood by exploring the specific life experiences of particular individuals." (Lightfoot 2018) Sigmund Freud developed psychodynamic theory. Lightfoot states, that behaviorism focuses on development because of learning and changes in behavior because of forming associations between behavior and its consequences. In the constructivist theory, Piaget believes children must experience life to understand it. Lastly, sociocultural theory was developed by Lev Vygotsky. This theory is the influence of culture on development.

Modern theories of development created new insights into the fundamental issues that created a concern for developmentalists. The number of developmental theories expanded tremendously. These theories are evolutionary, social learning, information processing, and systems. Evolutionary theories explain how human behavior contributes to the survival of species and how the evolutionary past influences individual development. (Lightfoot 2018) Social learning theories are about the behavior and consequence associations that children learn. Children learn this by interacting and observing during social settings. There are many important contributions to the study of human development. Information processing theories look at cognitive development and how children perceive, remember, organize, and manipulate information in different ways. Lastly, system theories make up parts and how the wholes and parts are organized, interact, and change over time.

Kendra Cherry states that theories around child development focus on explaining how children change and grow throughout childhood. (Cherry 2020) These theories focus on different parts of development that connect to cognitive, emotional, and social growth. Picking this topic will help me increase my knowledge for my future job and even help me while I am raising two toddlers. I will already understand what is going on. My oldest son is about to be 3. He currently receives services for speech and food therapy. He has sensory issues which lead to his struggling with his food. Speech has helped him tremendously. He was delayed in speaking. He did talk but it was more babble that I understood. He is now about to be 3 and saying full sentences and more.

Understanding Human Development Ursula M. Staudinger, Ulman E.R. Lindenberger, 2012-12-06 K Warner Schaie I am pleased to write a foreword for this interesting volume particularly as over many years I have had the privilege of interacting with the editors and a majority of the contributors in various professional roles as a colleague mentor or research collaborator The editors begin their introduction by asking why one would want to read yet another book on human development They immediately answer their question by pointing out that many developmentally oriented texts and other treatises neglect the theoretical foundations of human development and fail to embed psychological constructs within the multidisciplinary context so essential to understanding development This volume provides a positive remedy to past deficiencies in volumes on human development with a well organized structure that leads the reader from a general introduction through the basic processes to methodological issues and the relation of developmental constructs to social context and biological infrastructure This approach does not surprise After all the editors and most of the contributors at one time or another had a connection to the Max Planck Institute of Human Development in Berlin whether as students junior scientists or senior visitors That institute under the leadership of Paul Baltes has been instrumental in pursuing a systematic lifespan approach to the study of cognition and personality Over the past two decades it has influenced the careers of a generation of scientists who have advocated long term studies of human development in an interdisciplinary context
