## **Psychology By Hockenbury 6th Edition Chapter 11:**

*Discovering Psychology* Don Hockenbury, Sandra E. Hockenbury, 2016-03-02 Sandra Hockenbury and new coauthor Susan Nolan's remarkable textbook is grounded in the belief that all kinds of students can develop a real understanding of psychology and lasting scientific literacy. The authors act on that belief by using relatable personal stories to communicate the concepts of psychological science and the process of science itself and by presenting important research in a clear not oversimplified way. Hockenbury and Nolan also take full advantage of online learning creating activities in LaunchPad that have students thinking about psychology as scientists do. New co author Susan Nolan of Seton Hall University was recently designated a Master Teacher by the Society for Teaching Psychology. She regularly gives talks about incorporating scientific literacy into the introductory course and across the psychology curriculum.

**The Philosophical Dimension of Psychology: A Beginner's Guide** James A. Harold, 2022-01-04 Both students and professors typically assume that the content of introductory psychology textbooks which are empirical in nature are identical to psychology proper. Yet what is surprising is how many interesting psychological insights can be found in both philosophy and literature that are often not found in psychology texts. Such insights are clearly psychological in nature yet they do not go back to any empirical investigation. It seems that basic psychology textbooks typically providing the basis for undergraduate and graduate psychology programs represent only one important dimension of psychology: empirical psychology. But there is no simple co-extensive identity between psychology and empirical psychology. *The Philosophical Dimension of Psychology: A Beginner's Guide* begins with an investigation of what constitutes the subject matter of psychology which demonstrates the aspects of psychological reality that are ignored, missed or at times even theoretically denied by mainline contemporary psychology if they lack an empirical warrant. Such matters include inner conscious experience, the world of intrinsic value as well as the higher, uniquely personal dimension of human nature that is of intellect and will. This book therefore offers a more complete survey of the entire sphere of psychological reality which could provide the context for more properly interpreting empirical psychological phenomena. For example, should we understand psychological conditioning principles within a broader context of personal freedom? Is a person more rightly conceived in a psychologically immanent way that is oriented simply toward the fulfillment of instincts and needs or is there as well a transcendent orientation oriented to truth and meaning? Should we understand psychology simply from the point of view of efficient causation or do we need to also take into account final causation? It will be of interest to psychology students of either undergraduate or graduate level and of great use to those with no prior knowledge of philosophy.
