An Anthropology of Robots and AI Kathleen Richardson, 2015-02-11 This book explores the making of robots in labs at the Massachusetts Institute of Technology MIT It examines the cultural ideas that go into the making of robots and the role of fiction in co constructing the technological practices of the robotic scientists The book engages with debates in anthropological theorizing regarding the way that robots are reimagined as intelligent autonomous and social and weaved into lived social realities Richardson charts the move away from the worker robot of the 1920s to the social one of the 2000s as robots are reimagined as companions friends and therapeutic agents

Non-linear Predictive Control Basil Kouvaritakis, Mark Cannon, 2001-10-26 The advantage of model predictive control is that it can take systematic account of constraints thereby allowing processes to operate at the limits of achievable performance Engineers in academia industry and government from the US and Europe explain how the linear version can be adapted and applied to the nonlinear conditions that characterize the dynamics of most real manufacturing plants They survey theoretical and practical trends describe some specific theories and demonstrate their practical application derive strategies that provide appropriate assurance of closed loop stability and discuss practical implementation Annotation copyrighted by Book News Inc Portland OR

Advances in Robot Kinematics and Computational Geometry Jadran Lenarčič, Bahram Ravani, 2013-06-29 Recently research in robot kinematics has attracted researchers with different theoretical profiles and backgrounds such as mechanical and electrical engineering computer science and mathematics It includes topics and problems that are typical for this area and cannot easily be met elsewhere As a result a specialised scientific community has developed concentrating its interest in a broad class of problems in this area and representing a conglomeration of disciplines including mechanics theory of systems algebra and others Usually kinematics is referred to as the branch of mechanics which treats motion of a body without regard to the forces and moments that cause it In robotics kinematics studies the motion of robots for programming control and design purposes It deals with the spatial positions orientations velocities and accelerations of the robotic mechanisms and objects to be manipulated in a robot workspace The objective is to find the most effective mathematical forms for mapping between various types of coordinate systems methods to minimise the numerical complexity of algorithms for real time control schemes and to discover and visualise analytical tools for understanding and evaluation of motion properties of various mechanisms used in a robotic system

Sensors and Sensory Systems for Advanced Robots Paolo Dario, Centro E. Piaggio, 2012-12-06 This volume contains papers presented at the NATO Advanced Research Workshop ARW on Sensors and Sensory Systems for Advanced Robots which was held in Maratea Italy during the week April 28 May 3 1986 Participants in the ARW who came from eleven NATO and two non NATO countries represented an international assortment of distinguished research centers in industry government and academia Purpose of the Workshop was to review the state of the art of sensing for advanced robots to discuss basic concepts and new ideas on the use of sensors for robot control and to provide recommendations for future research in this area There is an almost unanimous consensus among investigators in the field of robotics that the addition of sensory capabilities represents the natural evolution of present industrial robots as well as the necessary premise to the development of advanced robots for nonindustrial applications However a number of conceptual and technical problems still challenge the practical implementation and widespread application of sensor based robot control techniques Crucial among those problems is the availability of adequate sensors

Advanced Fuzzy Logic Technologies in Industrial Applications Ying Bai, Hanqi Zhuang, Dali Wang, 2007-01-17 The series Advances in Industrial Control aims to report and encourage technology transfer in control engineering The rapid development of control technology has an impact on all areas of the control discipline New theory new controllers actuators sensors new industrial processes computer methods new applications new philosophies new challenges Much of this development work resides in industrial reports feasibility study papers and the reports of advanced collaborative projects The series offers an opportunity for researchers to present an extended exposition of such new work in all aspects of industrial control for wider and rapid dissemination In the mid 1960s and contemporary with Kalman's pioneering papers on state space models and optimal control L A Zadeh began publishing papers on fuzzy sets It took another decade before the fuzzy logic controller due to Mamdani and Assilion was reported in the literature ca 1974 and now the

fuzzy logic control paradigm is entering its fifth decade of development and application Thus this new Advances in Industrial Control monograph edited by Ying Bai Hanqi Zhuang and Dali Wang on fuzzy logic control and its practical application comes as a timely reminder of the wide range of problems that can be solved by this continually evolving methodology **Using the Engineering Literature** Bonnie A. Osif, 2016-04-19 With the encroachment of the Internet into nearly all aspects of work and life it seems as though information is everywhere However there is information and then there is correct appropriate and timely information While we might love being able to turn to Wikipedia for encyclopedia like information or search Google for the thousands of links **Computational Principles of Mobile Robotics** Gregory Dudek, Michael
