### Water Everywhere!

Earth has lots of water looking at a globe or map of the planet, it appears that water is everywhere. Ocean take up a huge fraction of the planet's surface. On land, enormous lakes appear in North America, Europe, and Asia. Mountains, canyons, rivers, streams, and ponds cover large parts of North America, Europe, Africa, and Asia. Hydrographs, scientists who study water, study to understand why and where the ground is permanently saturated with water. Water comes to be in every part of the world... but why?

Look at the world map again. Examine the hydrographs. United States, Northern Africa, the Arabian Peninsula, central Asia, and Australia. There are no lakes, no rivers, and few, if any, permanent streams. Hydrographs classify these areas as deserts. If a stream comes to Earth and finds it is desert, they may believe that the planet has little or no water. So why do some places, like Minnesota, have lots of water while others, like Arizona, have very little?

Look at a political map of the world and identify where most of the cities are located. How many cities are in the Sahel Desert and central Australia? There is lots of land, so why do humans not build

more cities in those areas? The answer may seem obvious: there are no rivers, no lakes, not any water in sight. Then, no, Riyadh in Saudi Arabia, Baghdad in Iraq, and Ouarzazate (Ouarzazat) in Morocco are all major cities in the middle of dry regions. Humans need water for their homes and crops just for themselves. If there is no water, why would a settlement be established? Then, how could the settlement grow into a large city? What could explain this phenomenon?

Even in regions located near water, water is hard to find. The majority of cities on Earth, including where it is located in deserts, is built on salt. Salt is a natural resource and makes living things very sick. If saltwater, salt water can even result in death. Many countries with specific adaptations can live in and consume salt water.

However, salt is not salty. Other water like from the city is salt, some, or none. It is good water with no salt at all. All cities and most towns also do not contain salt water, so humans use them as water sources. So why is the ocean salty? Where does the salt come from?
