The Use of Restricted Significance Tests in Clinical Trials David S. Salsburg, 2012-12-06 The reader will soon find that this is more than a how to do it book It describes a philosophical approach to the use of statistics in the analysis of clinical trials I have come gradually to the position described here but I have not come that way alone This approach is heavily influenced by my reading the papers of R A Fisher F S Anscombe F Mosteller and J Neyman But the most important influences have been those of my medical colleagues who had important real life medical questions that needed to be answered Statistical methods depend on abstract mathematical theorems and often complicated algorithms on the

computer But these are only a means to an end because in the end the statistical techniques we apply to clinical studies have to provide useful answers When I was studying martingales and symbolic logic in graduate school my wife Fran had to be left out of the intellectual excitement But as she looked on she kept asking me how is this knowledge useful That question what can you do with this haunted my studies When I began working in bio statistics she continued asking me where it was all going and I had to explain what I was doing in terms of the practical problems that were being addressed
