## Chapter 1 Research methods

### 1.1 Experiments

- 1
  - a laboratory experiment
  - b field experiment
- 2
  - a gender: male or female
  - b artistic ability: how well the participants redraw a complicated image
- 3 Deception: the students are being told it is a study about memory but it isn't, it's about artistic ability.
- 4 e.g. The image is complicated, so the participants might get distressed. They could use several simpler images instead.

### 1.2 Self-reports

- 5
  - a e.g. Closed: Do you have a phobia? Yes/no. Open: Tell me in detail about one of your phobias.
  - b To explore beyond the answers that participants would give to structured questions, so that new areas of interest can be investigated.
  - c e.g. Risk of psychological harm: Shareen's or Judith's questions could upset the participants just because they had to think about their phobia.

### 1.3 Case studies

- 6
  - a e.g. observation, interview, questionnaire
  - b
    - i e.g. The need for help may be distressing for the potential helpers (protection from psychological harm); the person with the disability could get hurt (protection from physical harm).
    - ii e.g. Protection from psychological harm: make sure that the help they need is not upsetting or risky.
  - c e.g. No, because it is only a case study. This is just one situation and helping in other situations could be different.

### 1.4 Observations

- 7
  - a Debra: naturalistic observation, Jin: controlled observation.
  - b Covert, because she is trying to hide from the animals by being in the tree.
  - c e.g. Debra's – an unstructured observation because different animals, with a range of different behaviours, could appear so she wouldn't know in advance what behavioural categories to use.

### 1.5 Correlations

- 8
  - a Ekua and Takis will be measuring two variables (the amount of coffee people drink and the number of dreams they recall) rather than manipulating one variable and measuring another.
  - b e.g. Dement and Kleitman asked their participants not to drink coffee, suggesting that more coffee is associated with less dreaming. This would be a negative correlation.
