Analysis in Psychology: The Contrast Between Individual People and General Science Craig P. Speelman, Marek McGann, 2016-11-29 In a recent paper we Speelman McGann 2013 argued that psychology s reliance on data analysis methods that are based on group averages has resulted in a science of group phenomena that may be misleading about the nature of and reasons for individual behaviour The paper highlighted a tension between a science in search of general laws on the one hand and the individual variable and diverse nature of human behaviour on the other This Research Topic explored this concern about the pitfalls of using the mean for the basis of psychological science The problem is universal in its applicability to psychology and opinion papers reviews and original empirical research from all areas of the discipline were invited A total of 16 authors contributed 9 articles to the Topic The range of issues that the authors viewed through the lens provided is impressive The papers in this collection include a range of perspectives that provide concrete examples of how to approach research design data collection and analysis differently No one contribution will provide a solution to our multifarious challenges but nor should it Our subject matter is complex and subtle our investigations and methodological techniques will need to be equally so Linking Perception and Cognition Michela C. Tacca, 2013 Perception and cognition are tightly related As our primary mode of contact with the world perception is the informational and causal foundation of our cognitive processes it is fundamental to our empirical thinking believing and action planning Traditional accounts of the mind consider perception and cognition to be distinct yet highly interrelated systems Much interdisciplinary empirical and

theoretical work from cognitive scientists and philosophers has attempted to elucidate the complex relations holding among these systems suggesting the existence not only of influences of perception on cognition but also vice versa. However many questions are left unanswered. Given that perception is a guide to our thinking about and acting upon the world appropriately the two systems must be able to talk to one another. Information carried by perception must be of a form adequate to be taken in by our various cognitive systems. The question arises: What kinds of structural similarities must hold between perceptual and cognitive representations for such communication to be possible? And how exactly do perceptual and cognitive representations interact? Some researchers have argued that the links between perception and cognition are so tight as to instill doubt as to the significance of the distinction between the two systems in the first place. Yet others insist that perception and cognition remain distinct. The aim of this Research Topic is to deepen our understanding of the kinds of interaction among perception and cognition and of the nature of the representational structures that would enable such interaction.

Provided by publisher Academic Skills Problems Edward S. Shapiro, Nathan H. Clemens, 2023-07-24. Now in a revised and expanded fifth edition that reflects current research and best practices in direct assessment and intervention, this text addresses a perennial need for school practitioners and practitioners in training. Presented is a comprehensive problem solving based approach for working with K-12 students who are struggling with reading, writing, or mathematics. The book provides a framework for evaluating the instructional environment as well as each student's context and unique learning needs, planning instructional modifications, and monitoring progress. The companion workbook, available separately, contains practice exercises and reproducible forms.

Subject areas: key words: school psychology, texts, assessing curriculum based evaluations, measurement measures, testing, observation, reading, mathematics, writing, multi-tiered systems of support, MTSS, RTI, learning disabilities, difficulties, struggling readers, students, handbooks.

Audience: School psychologists, K-12 school administrators, special educators, and classroom teachers, graduate students, and researchers in these fields. Together with the companion workbook, will serve as a text in graduate level courses on academic assessment and intervention.

Decision Making under Uncertainty Kerstin Preuschoff, Peter N. C. Mohr, Ming Hsu, 2015-06-16. Most decisions in life are based on incomplete information and have uncertain consequences. To successfully cope with real life situations, the nervous system has to estimate, represent, and eventually resolve uncertainty at various levels. A common tradeoff in such decisions involves those between the magnitude of the expected rewards and the uncertainty of obtaining the rewards. For instance, a decision maker may choose to forgo the high expected rewards of investing in the stock market and settle instead for the lower expected reward and much less uncertainty of a savings account. Little is known about how different forms of uncertainty, such as risk or ambiguity, are processed and learned about, and how they are integrated with expected rewards and individual preferences throughout the decision making process. With this Research Topic, we aim to provide a deeper and more detailed understanding of the processes behind decision making under uncertainty.

Theories of Visual Attention - linking cognition, neuropsychology, and neurophysiology Søren Kyllingsbæk, Signe Allerup Vangkilde, Claus Bundesen, 2015-09-02 The Neural Theory of Visual Attention of Bundesen Habekost and Kyllingsbæk 2005 was proposed as a neural interpretation of Bundesen's 1990 theory of visual attention TVA In NTVA visual attention functions via two mechanisms by dynamic remapping of receptive fields of cortical cells such that more cells are devoted to behaviorally important objects than to less important ones filtering and by multiplicative scaling of the level of activation in cells coding for particular features pigeonholing NTVA accounts for a wide range of known attentional effects in human performance and a wide range of effects observed in firing rates of single cells in the primate visual system and thus provides a mathematical framework to unify the 2 fields of research In this Research Topic of Frontiers in Psychology some of the leading theories of visual attention at both the cognitive neuropsychological and neurophysiological levels are presented and evaluated In addition the Research Topic encompasses application of the framework of NTVA to various patient populations and to neuroimaging as well as genetic and psychopharmacological studies

The Oxford Handbook of Research Strategies for Clinical Psychology Jonathan S. Comer, Philip C. Kendall, 2013-03-26 Mental health problems impose a staggering worldwide public health burden Regrettably whereas many sciences have been progressing for centuries e g biology chemistry it is only recently that the strategies of science have been applied to the field of clinical psychology At this relatively early stage in the science of clinical psychology the majority of work is ahead of us and as such the prepared investigator must be familiar with the full portfolio of modern research strategies a set of directions for getting from here to there To continue to move the science of clinical psychology forward investigators benefit when they systematically rely on research strategy routes that achieve favorable balances between

scientific rigor and clinical relevance With this need in mind The Oxford Handbook of Research Strategies for Clinical Psychology has recruited some of the field's foremost experts to explicate the essential research strategies currently used across the modern clinical psychology landscape that maximize both precision and significance Chapters in this volume address design measurement and analytic strategies for clinical psychology including comprehensive coverage of effective laboratory methods in experimental psychopathology single case experimental designs small pilot trials the randomized controlled trial adaptive and modular treatment designs and dissemination methods and models change measurement observational coding measurement of process variables across treatment structural and functional brain imaging and experience sampling data collection methods statistical power correlation and regression randomized clinical trial data analysis conventions in mediation and moderation analysis structural equation modeling meta-analytic techniques item response theory and the appropriate handling of missing data The book concludes with an integrative summary of research strategies addressed across the volume and guidelines for future directions in research methodology design and analysis that will keep our young science moving forward in a manner that maximizes scientific rigor and clinical relevance

Quantum Structures in Cognitive and Social Science Diederik

Aerts, Jan Broekaert, Liane Gabora, Sandro Sozzo, 2016-06-26 Traditional approaches to cognitive psychology correspond with a classical view of logic and probability theory More specifically one typically assumes that cognitive processes of human thought are founded on the Boolean structures of classical logic while the probabilistic aspects of these processes are based on the Kolmogorovian structures of classical probability theory However growing experimental evidence indicates that the models founded on classical structures systematically fail when human decisions are at stake These experimental deviations from classical behavior have been called paradoxes fallacies effects or contradictions depending on the specific situation where they appear But they involve a broad spectrum of cognitive and social science domains ranging from conceptual combination to decision making under uncertainty behavioral economics and linguistics This situation has constituted a serious drawback to the development of various disciplines like cognitive science linguistics artificial intelligence economic modeling and behavioral finance A different approach to cognitive psychology initiated two decades ago has meanwhile matured into a new domain of research called quantum cognition Its main feature is the use of the mathematical formalism of quantum theory as modeling tool for these cognitive situations where traditional classically based approaches fail Quantum cognition has recently attracted the interest of important journals and editing houses academic and funding institutions popular science and media Specifically within a quantum cognition approach one assumes that human decisions do not necessarily obey the rules of Boolean logic and Kolmogorovian probability and can on the contrary be modeled by the quantum mechanical formalism Different concrete quantum theoretic models have meanwhile been developed that successfully represent the cognitive situations that are classically problematical by explaining observed deviations from classicality in terms of genuine quantum effects such as contextuality emergence interference superposition entanglement and indistinguishability In addition the validity of these quantum models is convincingly confirmed by new experimental tests We also stress that since the use of a quantum theoretic framework is mainly for modeling purposes the identification of quantum structures in cognitive processes does not presuppose without being incompatible with it the existence of microscopic quantum processes in the human brain In this Research Topic we review the major achievements that have been obtained in quantum cognition by providing an accurate picture of the state of the art of this emerging discipline Our overview does not pretend to be either complete or exhaustive But we aim to introduce psychologists and social scientists to this challenging new research area encouraging them at the same time to consider its promising results It is our opinion that if continuous progress in this domain can be realized quantum cognition can constitute an important breakthrough in cognitive psychology and potentially open the way towards a new scientific paradigm in social science Psychosocial Strategies for Athletic Training Megan D. Granquist, Jennifer Jordan Hamson-Utley, Laura J.
