Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems. Thus it is par excellence a model of rational inquiry. Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades. Indeed the Enlightenment view of the rational human mind that reasons, makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century. Cognitive psychologists discovered that humans' thoughts and actions often deviate from rules imposed by strict normative theories of inference. Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats. Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem. This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education. We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program. In Simon's bounded rationality and its direct descendant ecological rationality, rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e.g. transitivity.

Design and development Michael O. Martin, Dana L. Kelly, Raymond J. Adams, 1996 The Third International Mathematics and Science Study (TIMSS) developed and administered tests and questionnaires in three student populations to document the quality of mathematics and science education in 45 participating countries. Study design, instrument development and research procedures were achieved through a complex collaborative process. This volume of the technical report focuses on study design and development. Each chapter addresses a critical issue in development. Documentation of TIMSS implementation and analytic procedures will be presented in a future volume. Chapters are: 1 Third International Mathematics and Science Study: An Overview, Michael O. Martin; 2 Development of the TIMSS Achievement Tests, Robert A. Garden and Graham Orpwood; 3 The TIMSS Test Design, Raymond J. Adams and Eugenio J. Gonzalez; 4 Sample Design, Pierre Foy, Keith Rust and Andreas Schleicher; 5 Development of the TIMSS Context Questionnaires, William H. Schmidt and Leland Cogan; 6 Development and Design of the TIMSS Performance Assessment, Maryellen Harmon and Dana L. Kelly; 7 Scoring Techniques and Criteria, Svein Lie, Alan Taylor and Maryellen Harmon; 8 Translation and Cultural Adaptation of the Survey Instruments, Beverley Maxwell; 9 Field Operations, Andreas Schleicher and Maria Teresa Siniscalco; 10 Training Sessions for Free Response Scoring and Administration of Performance Assessment, Ina V. S. Mullis, Chancey Jones and Robert A. Garden; and 11 Quality Assurance Procedures, Michael O. Martin, Ina V. S. Mullis and Dana L. Kelly. Three appendixes present acknowledgments, TIMSS test blueprints and survey operations forms. Contains 13
