Phenomenology of Natural Science L. Hardy, Lester Embree, 1992 Contemporary philosophy seems a great swirling almost chaos Every situation must seem so at the time probably because philosophy itself resists structuration and because personal and political factors within as well as without the discipline must fade in order for the genuinely philosophical merits of performances to be assessed Nevertheless some remarks can still be made to situate the present volume For example at least half of philosophy on planet Earth is today pursued in North America which is not to say that this portion is any less internally incoherent than the whole of which it thus becomes the largest part and the present volume is North American Incidentally the recognition of culturally geographic traditions and tendencies nowise implies that striving

for cross cultural if not trans cultural philosophical validity has failed or ceased Rather it merely recognizes a significant aspect relevant from the historical point of view Episteme Aesthetics Ethics Etc mology Analytic Philosophy Marxism Existentialism Etc Figure 1 There are two main ways in which philosophical developments are classified One is in terms of tendencies movements and schools of thought and the other is in terms of traditional sub disciplines When there is little contention among schools the predominant way is in terms of sub disciplines such as aesthetics ethics politics etc Today this mode of classification can be seen to intersect with that in terms of movements and tendencies both of which are represented in the above chart

Objectivity, Invariance, and Convention Talal A. Debs, Michael L. G. Redhead, 2009-07 Most observers agree that modern physical theory attempts to provide objective representations of reality However the claim that these representations are based on conventional choices is viewed by many as a denial of their objectivity As a result objectivity and conventionality in representation are often framed as polar opposites Offering a new appraisal of symmetry in modern physics employing detailed case studies from relativity theory and quantum mechanics Objectivity Invariance and Convention contends that the physical sciences though dependent on convention may produce objective representations of reality Talal Debs and Michael Redhead show that both realists and constructivists have recognized important elements of an understanding of science that may not be contradictory The position perspectival invariantism introduced in this book highlights the shortcomings of existing approaches to symmetry in physics and for the constructivist demonstrates that a dependence on conventions in representation reaches into the domain of the most technical sciences For the realist it stands as evidence against the claim that conventionality must undermine objectivity We can be committed to the existence of a single real ontology while maintaining a cultural view of science

Critical Appraisal of Physical Science as a Human Enterprise Mansoor Niaz, 2009-02-07 It is generally believed that doing science means accumulating empirical data with no or little reference to the interpretation of the data based on the scientist's theoretical framework or presuppositions Holton 1969a has deplored the widely accepted myth of experimentalism according to which progress in science is presented as the inexorable result of the pursuit of logically sound conclusions from unambiguous experimental data Surprisingly some of the leading scientists themselves Millikan is a good example have contributed to perpetuate the myth with respect to modern science being essentially empirical that is carefully tested experimental facts free of a priori conceptions leading to inductive generalizations Based on the existing knowledge in a field of research a scientist formulates the guiding assumptions Laudan et al 1988 presuppositions Holton 1978 1998 and hard core Lakatos 1970 of the research program that constitutes the imperative of presuppositions which is not abandoned in the face of anomalous data Laudan and his group consider the following paraphrase of Kant by Lakatos as an important guideline philosophy of science without history of science is empty Starting in the 1960s this historical school has attempted to redraw and replace the positivist or logical empiricist image of science that dominated for the first half of the twentieth century Among other aspects one that looms large in these studies is that of guiding assumptions and has considerable implications for the main thesis of this monograph Chapter 2
