Bonvillian, Charles Weiss, 2015-08-18 The American economy faces two deep problems expanding innovation and raising the rate of quality job creation Both have roots in a neglected problem the resistance of Legacy economic sectors to innovation While the U S has focused its policies on breakthrough innovations to create new economic frontiers like information technology and biotechnology most of its economy is locked into Legacy sectors defended by technological economic political social paradigms that block competition from disruptive innovations that could challenge their models Americans like to build technology covered wagons and take them out west to open new innovation frontiers we don't head our wagons back east to bring innovation to our Legacy sectors By failing to do so the economy misses a major opportunity for innovation which is the bedrock of U S competitiveness and its standard of living Technological Innovation in Legacy Sectors uses a new unifying conceptual framework to identify the shared features underlying structural obstacles to innovation in major Legacy sectors energy air and auto transport the electric power grid buildings manufacturing agriculture health care delivery and higher education and develops approaches to understand and transform them It finds both strengths and obstacles to innovation in the national innovation environments a new concept that combines the innovation system and the broader innovation context for a group of Asian and European economies Manufacturing is a major Legacy sector that presents a particular challenge

because it is a critical stage in the innovation process By increasingly offshoring production the U S is losing important parts of its innovation capacity Innovate here produce here where the U S took all the gains of its strong innovation system at every stage is being replaced by innovate here produce there which threatens to lead to produce there innovate there To bring innovation to Legacy sectors authors William Bonvillian and Charles Weiss recommend that policymakers focus on all stages of innovation from research through implementation They should fill institutional gaps in the innovation system and take measures to address structural obstacles to needed disruptive innovations In the specific case of advanced manufacturing the production ecosystem can be recreated to reverse jobless innovation and add manufacturing led innovation to the U S s still strong research oriented innovation system

Techno-Vernacular Creativity and Innovation Nettrice R. Gaskins, 2021-08-10 A novel approach to STEAM learning that engages students from historically marginalized communities in culturally relevant and inclusive maker education The growing maker movement in education has become an integral part of both STEM and STEAM learning tapping into the natural DIY inclinations of creative people as well as the educational power of inventing or making things And yet African American Latino a American and Indigenous people are underrepresented in maker culture and education In this book Nettrice Gaskins proposes a novel approach to STEAM learning that engages students from historically marginalized communities in culturally relevant and inclusive maker education Techno vernacular creativity TVC connects technical literacy equity and culture encompassing creative innovations produced by ethnic groups that are often overlooked TVC uses three main modes of activity reappropriation remixing and improvisation Gaskins looks at each of the three modes in turn guiding readers from research into practice Drawing on real world examples she shows how TVC creates dynamic learning environments where underrepresented ethnic students feel that they belong Students who remix computationally for instance have larger toolkits of computational skills with which to connect cultural practices to STEAM subjects reappropriation offers a way to navigate cultural repertoires improvisation is firmly rooted in cultural and creative practices Finally Gaskins explores an equity oriented approach that makes a distinction between conventional or dominant pedagogical approaches and culturally relevant or responsive making methods and practices She describes TVC habits of mind and suggests methods of instructions and projects

Climate Change Adaptation and Development Tor Håkon Inderberg, Siri Eriksen, Karen O'Brien, Linda Sygna, 2014-11-20 Climate change poses multiple challenges to development It affects lives and livelihoods infrastructure and institutions as well as beliefs cultures and identities There is a growing recognition that the social dimensions of vulnerability and adaptation now need to move to the forefront of development policies and practices This book presents case studies showing that climate change is as much a problem of development as for development with many of the risks closely linked to past present and future development pathways Development policies and practices can play a key role in addressing climate change but it is critical to question to what extent such actions and interventions reproduce rather than address the social

and political structures and development pathways driving vulnerability The chapters emphasise that adaptation is about much more than a set of projects or interventions to reduce specific impacts of climate change it is about living with change while also transforming the processes that contribute to vulnerability in the first place This book will help students in the field of climate change and development to make sense of adaptation as a social process and it will provide practitioners policymakers and researchers working at the interface between climate change and development with useful insights for approaching adaptation as part of a larger transformation to sustainability
