Fowler, Jean-Louis Granju, 2011-03-16 Among different approaches that can be considered for concrete rehabilitation bonded overlays are often the most economical alternative The primary purpose of overlays is to extend the life of the candidate structures either by restoring the quality and integrity of the surface and or the re establishing or improving the load carrying capacity Nevertheless the durability of bonded overlay systems still draws concerns in the technical community because of bond sustainability problems encountered in a number of cases At this time there is still no accepted design approach or methodology that can warrant the practitioner a successful outcome of the repair This State of Art report summarizes the findings with respect to all aspects involved in the overlaying process
