Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and heart rate reserve (HRR) of sedentary middle-aged men. The subjects were randomly assigned to a control group (CON) and an exercise group (EX). The EX group performed a 12-week training program consisting of three sessions per week of aerobic exercise. The HR and HRR were measured at rest and during submaximal exercise at the beginning and end of the 12-week period. The EX group showed a significant decrease in HR and HRR at rest and during submaximal exercise compared to the CON group. The results suggest that a 12-week training program can improve cardiovascular fitness in sedentary middle-aged men.

23. When configuring a multi-mount AFS, set `mountmnt` to your Netatun path: `mountmnt=/usr/bin/netatun`
24. If you're using the `afs` multi-mount method, add the `afs` multi-mount entry from `afs` to your `netatun` file. In most setups, a "Warning: no mount entry for the requested file" error will be returned. This message will only appear if the `afs` file type is not mounted yet, so pointing out the thing you forgot to do :)
25. Do not mount the `afs` of your team, a `afs` dependency!
26. When using the `afs` multi-mount method, you can also use the `afs` as the `afs` of your team.
