**Abstract**—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 10 women, 40 to 50 years of age, who were sedentary and had no cardiovascular or pulmonary disease. The subjects were randomly assigned to a 10-week training program or a control group. The training program consisted of three sessions per week of aerobic exercise at 60% of maximum HR. The control group did not exercise. The subjects were monitored for HR and EE during the training program and for 10 weeks after the training program. The results showed that the training program had a significant effect on HR and EE. The HR of the training group decreased significantly from 170 to 150 beats per minute (bpm) during the training program and remained at 150 bpm for 10 weeks after the training program. The EE of the training group increased significantly from 1,800 to 2,200 kcal per day during the training program and remained at 2,200 kcal per day for 10 weeks after the training program. The control group did not show any significant changes in HR or EE. The results of this study suggest that a 10-week training program can have a significant effect on HR and EE in sedentary, middle-aged women.

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light or other light sources. To avoid this, there are two things the producer should do:
  - Turn off the lights at the end of the work day.
  - Use red light for night shifts, as the wavelength of this light may be less disruptive to the circadian rhythm.
- The end of the shift should be followed by a period of relaxation, and the worker should be encouraged to sleep during the day. The worker should be encouraged to sleep during the day. The worker should be encouraged to sleep during the day.

When you install your T-Value One Connection, improper installation of all four screws (50 combinations for One Connection) will void the warranty. Please, before installing, refer to the correct installation instructions. Failure to maintain proper ventilation may result in a serious problem with the product.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. For example, suppose the price for the output rises. The producer will want to produce more of the output, and this will require hiring more workers. The producer will also want to use more of the other inputs, and this will require hiring more of those inputs. The producer will also want to use more of the other inputs, and this will require hiring more of those inputs.
