CHAPTER ONE LINEAR MOTION

Introduction:

Study of motion is divided into two:

1. Kinematics
2. Dynamics

In kinematics forces causing motion are disregarded while dynamics deals with motion of objects and the forces causing them.

A. Displacement

Distance covered by a body in a specified direction is called displacement. It is denoted by letter 's' and has both magnitude and direction. Distance is the movement from one point to another. The SI unit for displacement is the metre (m).

B. Speed

This is the distance covered per unit time.

Speed = distance covered/ time taken. Distance is a scalar quantity since it has magnitude only. The SI unit for speed is metres per second (m/s or ms⁻¹).

Average speed = total distance covered/total time taken

Other units for speed used are km/h.

Examples

1. A body covers a distance of 20m in 4 seconds, it rests for 10 seconds and finally covers a distance of 50m in 10 seconds. Calculate the average speed.

Solution

Total distance covered = 20 + 50 = 70m

Total time taken = 4 + 10 + 10 = 24 seconds

Therefore average speed = 70/24 = 2.9m/s

2. Calculate the distance in metres covered by a body moving with a uniform speed of 100 km/h in 20 seconds.

Solution

Distance covered = speed × time

$$= 100 \times \frac{20}{3600} \text{ (convert km/h to m/s)}$$

$$= 50 \times 20$$

$$= 1,000 \text{ m}$$

3. Calculate the time in seconds taken a body moving with a uniform speed of 100 km/h to cover a distance of 2,000 km?

Solution

Speed: 100 km/h = $100 \times \frac{1000}{3600} = 27.78 \text{ m/s}$

Time = distance/speed

$$2000 \div 27.78 \text{ m/s}$$

$$= 72,000 \text{ seconds.}$$

C. Velocity

This is the change of displacement per unit time. It is a vector quantity.

Velocity = change in displacement/total time taken

The SI unit for velocity is m/s

Datapolis Paul Cournot, Negar Sanaan Bensi, 2024-02-05 DATAPOLIS looks into the materiality of data its inherent ethical and political contradictions as well as cultural and environmental footprints by following two main trajectories the first one

attempts to define what the cloud is and how it operates From the systems and infrastructures behind the Internet to the apparatus gizmos and buildings that can transcend scales and temporal dimensions The second one explores how data penetrates our existence not only by affecting the ways we live and work or design and make cities but by offering distinct ways of life and organization that otherwise would not have been possible Through various visual and textual materials this book speculates on the ways in which architecture can engage with data and digital technology beyond its mere instrumental use in making smart cities DATAPOLIS is edited by Paul Cournet and Negar Sanaan Bensi With contributions by Kees Kaan Kate Crawford Shannon Mattern Ruha Benjamin Marina Otero Verzier and Joost Grootens a o The most complete version of this work was published in 2023 by nai010

Complexity Economics Olivér Kovács, 2022-07-15 Our socio economic innovation ecosystem is riddled with ever increasing complexity as we are faced with more frequent and intense shocks such as COVID 19 Unfortunately addressing complexity requires a different kind of economic governance There is increasing pressure on economics to not only going beyond its traditional mainstream boundaries but also to tackle real world problems such as fostering structural change enhancing sustained growth promoting inclusive development in the era of the digital economy and boosting green growth while addressing the divide between the financial sector and the real economy This book demonstrates how to apply complexity science to economics in an effective and instructive way in the interest of life enhancing policies The book revolves around the non negligible problem of why economics to date seems to be inadequate in guiding economic governance to navigate through real and ever intensifying complex socio economic and environmental challenges With its interdisciplinary approach the book scans the nuanced nexus between complexity and economics by incorporating as well as

transcending the state of the art literature It identifies ways to trigger opportunities for behavioural change in the economic profession with respect to how and what to teach introducing and developing further complexity economics taking into account the configuration of its main principles and outlining the silhouette of next generation economic governance The book deciphers recommendations for economic theory practice education and economic governance It will be of interest to students scholars academics think tank researchers and economic policy practitioners at the national and or supranational levels
